Business summary (around 200 words)

Ambient Systems is an integrated technology agency that uses 5+ years of R&D to provide engineering, FP&A, IP, and Industrial AI services through fixed, rapid engagements (€1,500–€3,500).

Incorporated in Hong Kong with Singapore contact address, we support key clients in Asia to consolidate control and expand globally by cutting costs and accelerating process decision making through data-based technology prototypes.

Proven results include:

• 24% ROI in vertical farming yield optimisation (Singapore-based facility)

• 12% OpEx reduction in energy costs

• TRL-6 level IP and technology

We specialise in optimisation, energy-system modelling, and IP co-development in global supply chains -- skillset directly applicable to reducing lead-times in sustainable energy projects, such as wind or oil & gas.

Past corporate collaborations include competition wins with Panasonic, Google Cloud, and National University of Singapore (NUS) GRIP.

We invoice from Hong Kong, deliver globally, and are immediately available to work on Singapore-based projects.

Proposal to the challenge (minimum 100 word)

We address the critical Challenge of long HV/MV equipment lead times for Offshore Substations by focusing on Technologies for Overall Optimization. Our fixed €2,500 PoC is ready immediately and delivers results in 4 weeks total (2 weeks to results, 2 weeks to final report). The scope includes securing an NDA, setting metrics, implementing an AI vendor scorecard, and deploying a predictive supply-chain simulator for "what-if" scenarios, concluding with a report on potential IP co-development. Successful implementation post-PoC targets enhanced data clarity, 15–20% lower procurement costs (validated by a 12% OpEx reduction track record), and 20% faster cycles. We are billed from Hong Kong, delivered from Belgrade/Hong Kong, with a Singapore contact address, and offer optional on-site visits in Asia or Europe.

Collaboration track record

Panasonic (via ACE Singapore), Google Cloud for Startups Hackathon Singapore, NUS GRIP

Investor of the company

Currently bootstrapped / angel-investor backed. Previous NUS institutional round.

Ambient Systems

Integrated technical expertise in engineering, FP&A, AI, and IP.

Turning five years of deep-tech R&D into specialized consulting that delivers direct results.

Based from Belgrade with global operations in Hong Kong.

Introduction

Agency Overview

Driving financial performance through engineering, AI, and IP.

Background

Offering expertise after five years of building an award-winning, PCT-patented NUS deep-tech AI technology startup that achieved technical readiness (TRL 6).

Our Mandate

- ✓ Industrial applications
- ✓ Streamlined FP&A
- ✓ Intellectual Property R&D
- ✓ Software subscription (in development)

Service Lines:

1. **Civil Engineering & Energy Systems**
   Drafting and load calculations.
   Solar array design, microgrid optimization, building energy efficiency.
2. **Supply-Chain Management & Vendor Optimization**
   Sourcing strategy, customs optimization, vendor scorecards.
3. **Vertical Farming / CEA Optimization**
   Layout design, yield modeling, environmental controls.
4. **IP Strategy & Support**
   Prior art sea
   patent filing
   freedom-to-
   analysis.

Active on Leading Platforms: Upwork, Freelancer.com, Catalant, AlphaSights, and GLG Insights—connecti
clients who need immediate, specialized expertise.

Invention delivers 24% ROI.

Case Study

End-to-End Climate Management Solution for Indoor Farming

SITUATION or BUSINESS CHALLENGE

Indoor farmers face significant crop loss and high operational costs due to t inability to maintain optimal climate conditions. Existing solutions are fragm manual, and labor-intensive, often leading to unmonitored temperature an humidity imbalances that promote mold and pests, ultimately reducing yiel quality and quantity.

APPROACH

- Defined the **full-stack ML solution** (sensors, optimization engine, dashboar the scalable B2B SaaS + Hardware business model.
- Secured pilot **Letters of Intent (LOIs)** with two key vertical farm operators t validate demand and establish the initial pipeline.
- Developed the financial model projecting a **24% improvement in client ma** with a rapid **4–6-month customer payback period**.
- Produced all investment deliverables (Investment Deck, Business Plan) and c the IP/patent strategy for the core optimization algorithm.

OUTCOMES ACHIEVED

- 24% ROI Model: Developed a model projecting a 24% improvement in cli margins with a rapid 4–6-month customer payback.
- Validation: Achieved critical market validation and established a pipeline through secured commercial LOIs.
- IP Foundation: Defined the patent strategy for the core optimization alg

Previous Experience

Results achieved personally at prior ventures.

Case studies in distributed mining, SEC big pharma disclosures, and image recognition.

	Distributed Mining Company	Conflict Minerals	Image Neural Netwo
Challenge	Uncontrolled OpEx (Energy Costs). No link between real-time operational data and financial planning; resulting in reactive procurement.	Urgent SEC 3TG Conflict Minerals disclosure. Major pharmaceutical client required rapid compliance under a tight regulatory deadline.	Startup needed a robust, high-a AI vision model to automatically artisanal mining by analyzing sa imagery across complex biomes
Action	Developed Big Data predictive OpEx models using operational and market data. Integrated models for real-time cost visibility at site level.	Led data analysis and consolidated raw data from 20+ international offices. Advised on compliance risk mitigation for SEC disclosure requirements.	Led as Principal Investigator (PI). Designed and implemented Convolutional Neural Network (models. Developed an automated data c and prediction pipeline.
Result	12% sustained reduction in global energy costs, achieving millions in OpEx savings.	Successfully met critical U.S. regulatory disclosure. Delivery executed under urgent, one-day notice.	Delivered a validated CNN imag classification model and system architecture.

Solution for Seatrium: Accelerating HV/MV Offshore Procureme

- **Challenge #1**: Overcoming long lead time of HV/MV equipment for the delivery of Offshore Substations
- **Collaboration Need #3**: Technologies for Overall Optimization
- Our fixed €2,500 PoC approach:
  - Secure NDA or equivalent
  - Setting metrics together
  - AI vendor scorecard dashboard (real-time ranking)
  - Predictive supply-chain simulator (what-if scenarios)
  - Report on potential IP co-development from the PoC
  - Presentation (report or pitch-deck format)

Potential Outcomes (if recommendatio implemented post-PoC):

- Data clarity
- 15–20% lower procurement costs (prc track record: 12% OpEx reduction for mining client)
- 20% faster cycles (if simulation implemented)

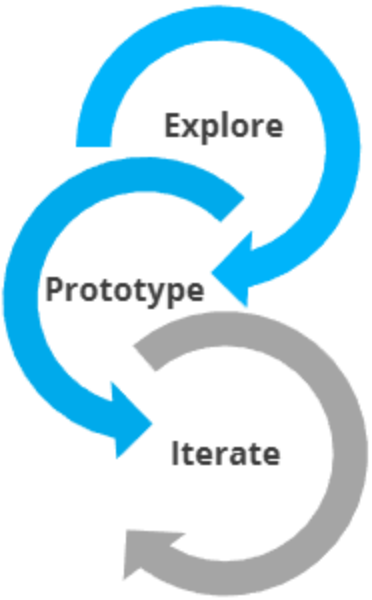

Delivery:

- Ready for your data immediately
- 4 weeks total: 2 weeks to results + 2 w to final report
- Billed from Hong Kong
- Delivered from Belgrade / Hong Kong
- Singapore contact address
- Optional on-site visits (Asia or Europe)

Business model

Our approach

Transparent Pricing

Book a Free 30-Minute Call

- We discuss your challenge, goals, and constraints.
- No pitch–just a questioning conversation to see if we can solve your pr

Receive Fixed-Price Proposal in 48 Hours

- Clear scope, defined deliverables, flat fee.
- You know exactly what you're paying and what you're getting before committing a dollar.

Get Results in 30-60 Days

- Fast deliverable outcomes, tangible outcomes, and clear next steps.
- Most engagements pay for themselves in the first month.

Most engagements start between **€1,500–€3,500 fixed price**.
No hourly billing. No scope creep. No surprise invoices.

Ivan Damnjanovic
Founder
Technical Lead & Systems Architect

Entrepreneur and inventor from Belgrade with 10 years of experience across Asia (Singapore, Nepal, Hong Kong). Track record scaling YC-backed startup and cross-border intellectual property ventures.

Languages: Native Serbian & English (fluent); Intermediate French

Let us bring the tech to you.

Current: Based in Belgrade with global operations in Hong Kong, available for remote engagements globally.
Future: Centralizing global operations in Belgrade after mid-2026 to serve European clients.

Languages: Native Serbian & English (fluent); Intermediate French
