Entry details

Challenge detail (Please select challenge 1 if the challenge owner has only one challenge statement)	Challenge 1
First name	
name	Damnjanovic
Position	Founder & Director
Email	ivan@ambientsystems.ai
Phone number	[redacted]
Country	Hong Kong
Year of establishment	2023
Number of employees	1
Your category	Startup (Seed)

Business summary (around 200 words)

> Ambient Systems is an integrated technology agency that uses 5+ years of R&D to provide engineering, FP&A, IP, and Industrial AI services through fixed, rapid engagements (€1,500–€3,500).
>
> Incorporated in Hong Kong with Singapore contact address, we support key clients in Asia to consolidate control and expand globally by cutting costs and accelerating process decision making through data-based technology prototypes.
>
> Proven results include:
>
> • 24% ROI in vertical farming yield optimisation (Singapore-based facility)
>
> • 12% OpEx reduction in energy costs
>
> • TRL-6 level IP and technology
>
> We specialise in optimisation, energy-system modelling, and IP co-development in global supply chains -- skillset directly applicable to reducing lead-times in sustainable energy projects, such as wind or oil & gas.

Past corporate collaborations include competition wins with Panasonic, Google Cloud, and National University of Singapore (NUS) GRIP.

We invoice from Hong Kong, deliver globally, and are immediately available to work on Singapore-based projects.

Proposal to the challenge (minimum 100 word)	Ambient Systems proposes to implement our Industrial Finance AI Assistant through a rapid, fixed-price Proof-of-Concept (€1,500 – €3,500) that directly integrates financial oversight with field operations. Our solution begins by deploying an AI model available off-line for supervisors that instantly converts unstructured on-site data—such as voice memos, photos of defects, and text logs—into structured, enterprise-ready data. The proprietary advantage lies in our Industrial Finance AI Engine, which automatically compares this actual, real-time field data against the ideal progress curve derived from master engineer drawings and best-practice process sequence steps. A lack of timely data or known problems are converted into a Budget Variance data point (Financial Risk Attribution). This process eliminates administrative lag, providing YTL with real-time financial control and predictive risk management, guaranteeing measurable ROI within the initial 4-week sprint and culminating in a comprehensive 90-Day Expansion Roadmap. This approach transforms field reporting from chore into a valuable financial operations mechanism based on true data from the data.
Collaboration track record	Panasonic (via ACE Singapore), Google Cloud for Startups Hackathon Singapore, NUS GRIP
Investor of the company	Currently bootstrapped / angel-investor backed. Previous NUS institutional round.
