We have released the prototype for some parts of the system: sensors, web app, and simulated machine learning model. We can build it the product quite quickly if once we acquire initial customers.

How many active users or customers do you have? If you have some particularly valuable customers, who are they? If you're building hardware, how many units have you shipped?
We signed three agreements with AgTech companies in Singapore. We are now working on developing and launching a similar solution for other segments, namely retail, medical facilities, and smart homes.

What was your revenue in the last 6 months?
We are pre-revenue

Anything else you would like us to know regarding your revenue or growth rate?

If you've applied previously with the same idea, how much progress have you made since the last time you applied? Anything change?
We applied with the AgTech launch market last run, but decided to expand our offering for this segment and provide the offering for other sectors as well.

IDEA

Which group of people are your customers? What problems do you solve for your customers?
Our customers range from small to medium business operators to global commercial real estate services firms. We are looking to provide a subscription service to data science services that will help them manage their operations. The expected outcome for the user is overall enhanced experience for the occupant (tenant) while saving on operational costs such as energy and payroll.

Why did you pick this idea to work on? Do you have domain expertise in this area? How do you know people need what you're making?
I picked this idea to work on because there is a big opportunity in digital transformation of the built environment. As the gap between digital and physical worlds merges, business owners will need better automation solutions (driven by AI) to free up their time and create highly customized user experiences at the location. I've spoken with many business operators about their challenges of meeting the many competing priorities across a fragmented network of technologies and equipment.

What's new about what you're making? What substitutes do people resort to because it doesn't exist yet (or they don't know about it)?
There are many IoT solution providers out there (and some emerging AI platforms), but the user is still left on their own to figure out how to make the most of this new technology. Moreover, the operators of these businesses are usually experts in their field such as healthcare, retail, or agriculture (rather than digital tech). We want to provide a product to free up their creativity and time to focus on their main area of interest while making progress with their triple bottom line.

Who are your competitors, and who might become competitors? Who do you fear most?
There are some big and small IoT companies who are developing AI offerings as well. At the same time, there are incumbent automation solution providers who are looking to tailor their offerings for various segments. However, the customer is still left with the same challenges of evaluating vendors and managing the system after commissioning.

What do you understand about your business that other companies in it just don't get?
We are strong in digital design, data science, and have the specialist knowledge to embed in our AI-driven automation solution.

What's your business model? How much revenue per year can you achieve in 5 years?
