Describe the problem you are trying to solve *

Real Estate Asset Managers stand to potentially lose 40% of their annual returns and 20% of property values due to climate change risks. Most portfolio managers are not completely factoring in the cost of transition and physical risks of climate change. This can lead to many assets being overvalued or undervalued, such as those more resilient to climate risks or with adoption of green technologies.

How are you going to solve the problem? *

Our product helps building owners identify room for improvements to mitigate climate risk, both direct and indirect. It combines conventional and new data and metrics to identify risk exposure and subsequently provide advice for improvement. Some of this advice may mean upgrading technology at the facility or even divesting from certain carbon intensive properties. Our product is aimed for asset and portfolio managers of commercial real estate.

What is your unique selling proposition? *

(i.e. Competitive advantage, MOAT)

With Ambient you can expect three main benefits across the building lifecycle: Enhanced valuation accuracy 15% to 25%, reduced operating expense ratio by 30%, and 3x time savings from current excel-based modelling and manual data analytics.

Our USP comes through three features encompassing both business model and machine learning innovation. These are: flexible on-demand subscription, simple and affordable pricing plans, and specialized AI model customization.

What is your traction so far, and projection for next 2-3 years? *

We launched the company in June 2021 through National University of Singapore's deep tech incubator: Graduate Research and Innovation Programme. Through NUS GRIP, we received S$100k and an exclusive IP license (invented by the founder). We recently joined an incubator at the Singapore Management University (SMU) where we have pivoted towards innovation in machine learning towards net zero in the real estate sector. We anticipate to grow rapidly in this space by completing 3 POCs with local companies in the next 6 months before driving full-scale commercialization with leading real estate asset managers in Singapore and APAC in the next 2-3 years.

How much are you seeking for this round? (USD) *

We typically invest between US$2M to U$8M.

2000000

Deck *
