Startup Application Form

English

2022秋季创业营

COMPANY

Company name
Ambient Systems 天眼查 烯牛数据 企名片

Company URL, if any
https://www.ambientsystems.ai/

Product name
Ambient Systems

If you have a demo, what's the URL? For non-software, demo can be a video.
https:// /

Describe your product in 50 characters or less.
Actionable Decarbonization through Data Science

What is your company going to make?
Ambient has been building a new suite of machine learning models for the built environment. By combining latest advances in machine learning with specialist knowledge, we can provide holistic automation solutions.

What categories best apply to your company?
Enterprise, B2B, Artificial Intelligence, Energy, Sustainability

Which city are you currently living and working in?
Singapore, Singapore

How many founders are there with at least 5% equity in the company? (the number must match the information entered in "FOUNDERS" section, at most five founders)
3

Please enter the url of an 1-minute video uploaded to Youku or other video platforms (please provide the password if it's private) introducing the founder(s). This video is an important part of the application.(Follow the Video Guidelines: www.miracleplus.com/videoguideline)
https://www.loom.com/share/996ed19220244f83bf20686344ceac78

Video password (if any)

How long have the founders known one another and how did you meet? Have any of the founders not met in person?
Ivan founded the Singapore entity last year (NUS and angel investors have a minority stake in the company), but we want to start a sister company in China with the current team.

FOUNDERS

1st 2nd 3rd

Name
Ivan Damnjanovic

Email
ivan@ambientsystems.ai

Phone
65[redacted]

WeChat ID

Hometown
Belgrade, Serbia / Toronto, Canada (dual resident)

Schools, Degrees (including field of study), and Years of Graduation
National University of Singapore, Computer Science, 2021;
University of Toronto, Civil Engineering / Sustainable Energy, 2015

Employers, Position / Titles and Dates
Ambient Systems, Founder, 2020-Present
Creative Destruction Lab, Project Manager, 2018-2019;
Various Clean Tech Startups, Product management, 2015-2018;
Deloitte Canada, Analyst, 2013-2014

Please tell us about the time you most successfully hacked some (non-computer) system to your advantage.
For my master's project, I wanted to show MEMS sensors can be used to compliment audio signals. The proposed solution has many applications in the localization space, such as smart homes security. The idea was straightforward, but difficult to execute since I had only two months to perform the experiments. Since there was no time to ship and assemble my own sensors, I programmed my iPhone to collect raw sensor readings various key sensors, such as the accelerometer and magnetometer. The raw data resembled a world-class IoT sensing device. This was sufficient to move forward with developing the machine learning model to test the main hypothesis – all without spending money on expensive equipment.

Please tell us in one or two sentences about the most impressive thing other than this startup that you have built or achieved.
Prior to starting Ambient and my masters degree at the National University of Singapore (NUS), I helped several early-stage startups launch their products and raise over $1.2M (USD) from various investors, including Y Combinator, Schneider Electric, and Audi

Are you a technical founder?
Yes

Do you have at least 5% equity in the company you're applying with?
Yes

Will you come to Beijing to participate in the office hours and events hosted by through Nov 2022, if we fund you?
Yes

PROGRESS

what is the company's progress for the past 6 months (in terms of tech development, user acquisition, revenue and funding)
Since launching in June last year, we have received SG $100k from National University of Singapore and CA $30k from angel investors, signed an exclusive license for the IP (invented by the founder), and built a fully functional prototype (MVP). We won a top 3 spot in Singapore at the Google for Startups Hackathon in June this year. Recently, we are preparing a MVP pitch for SMRT/Stellar Lifestyle to drive decarbonization for this leading multi-modal public transport operator in Singapore.

How long have each of you been working on this? How much of that has been full-time? Please explain.
We've been working on this idea for a couple of months

Are people using your product?

Yes

When will you have a prototype or beta? If it's already live, when was it launched?
We have launched the product through a presentation and live demo at Google's Singapore office (APAC HQ). The prototype is available to early adopters. We also have over 20 users who are currently using it and providing feedback.

How many active users or customers do you have? If you have some particularly valuable customers, who are they? If you're building hardware, how many units have you shipped?
We signed three agreements with AgTech companies in Singapore and received sponsorship to work with SMRT / Stellar Lifestyle , which is Singapore's leading transit company and retail property manger across the rail network with over 3 million users.

What was your revenue in the last 6 months?
$1k-$2k

Anything else you would like us to know regarding your revenue or growth rate?
We're investing in building and protecting the technology before going into full scale commercialization

If you've applied previously with the same idea, how much progress have you made since the last time you applied? Anything change?
We applied with the AgTech launch market last run, but decided to expand our offering for this segment and provide the offering for other sectors as well.

IDEA

Which group of people are your customers? What problems do you solve for your customers?
Our customers range from small to medium business operators to international commercial real estate firms. We are looking to provide a subscription service to data science services that will help them manage their operations towards decarbonization.

Why did you pick this idea to work on? Do you have domain expertise in this area? How do you know people need what you're making?
We picked this idea to work on because there is a big opportunity in applying data science to the decarbonization dilemma. As most solutions focus on the hardware interventions and carbon trading, many competitors overlook efficiency gains potential. We fill the gap between digital and physical worlds since business owners will need better automation solutions (driven by AI) to free up their time and create highly customized user experiences at the location. We've spoken to many of the leading real estate companies here locally in Singapore and validated this need. Now we are in the stage of validating (and protecting) the product and technology.

What's new about what you're making? What substitutes do people resort to because it doesn't exist yet (or they don't know about it)?
There are many emerging decarbonization software providers out there, but the user is still left on their own to figure out how to balance decarbonization targets with profitability. Some companies charge an additional consulting fees to help users figure this out. But even consultants overlook the ongoing changes in carbon and energy markets, as well as the business fundamentals of that particular user.

Who are your competitors, and who might become competitors? Who do you fear most?
There are a few emerging carbon accounting companies in US and APAC, such as Unravel Carbon (Singapore/Australia) and Miotech (HK). Then a few more established startups such as Sinai Technologies and Persefoni. However, everyone is fairly new. The companies mentioned raised their round in the past year. Therefore, we're most concerned with the unpredictability of carbon prices and international regulatory environments that drive it.

What do you understand about your business that other companies in it just don't

get?
We are strong in digital design, data science, and have the specialist domain knowledge in this space. The differentiating factor is our approach. We don't only focus on carbon measurement as something to eliminate, but the underlying energy consumption and business fundamentals. In other words, we help companies become more profitable while achieving broader decarbonization targets. The secret to how we do this is based on data science and our deep domain expertise in supporting engineering and sciences.

What's your business model? How much revenue per year can you achieve in 5 years?
We have a straightforward B2B SaaS subscription model. Pricing is based on the number of data feeds we are processing as well as the AI models running. We estimate the overall size of the market for our type of solution about $18B+ globally, growing at 28% CAGR, based on the number of locations that could use our product. We aim to capture $500M, in revenues in 3-5 years by focusing on these main markets.

How will you get users? If your idea is the type that faces a chicken-and-egg problem in the sense that it won't be attractive to users till it has a lot of users (e.g. a marketplace, a dating site, an ad network), how will you overcome that?
Our machine learning models require data to run, but we can overcome this through simulated data to demonstrate to the initial users and build credibility. Once the user ties together their data feeds with us, we deliver results almost immediately.

Why do you think this is the right time for you to start your business?
We're experiencing a convergence and rapid growth of various technologies: IoT, big data, , and AI. Business owners and operators are also facing some new challenges with carbon pricing. Nonetheless, there is tangible opportunity for these businesses to take their digital transformation to the next level with our solution and potentially create decarbonization trends into a revenue opportunity instead of a regulatory risk.

LEGAL

Have you incorporated, or formed any legal entity (like an LLC) yet?
Yes

If registered, which city is your company registered at? If not registered yet, which city are you planning to register your company at?
Ambient Systems Pte. Ltd. (Singapore)

Please describe the breakdown of the equity ownership in percentages among the founders, employees and any other stockholders. If there are multiple founders, be sure to give the equity ownership of each founder.
Shareholder structure pending conversion of Singapore entity (looking to establish a China entity through this initiative)

Have your startup raised funding?
Yes - most recent round valuation less than 50M RMB

List any investments your company has received. Include the name of the investor, the amount invested, the premoney valuation / valuation cap.
National University of Singapore: SGD 100k
Private Investor: CAD 30k

Who is the owner of the company's core product and technology? Have you registered your intellectual property?
Company owns the product and technology. The CEO (and founder) is the sole inventor of the related patents and IP.

Does your company have any pending lawsuit or claim?
None

OTHER

If you had any other ideas you considered applying with, please list them. One may be something we've been waiting for. Often when we fund people it's to do something they list here and not in the main application.
Ivan, the founder, is personally interested in potential of blockchain technologies, but at this time I am focusing on AI opportunities.

Please tell us something surprising or amusing that one of you has discovered.
After consuming a green smoothie, your body will naturally produce anti-inflammatory compound coenzyme Q10 when exposed to the sun (thanks to the chlorophyll circulating in your blood after consumption). This is the closest people have gotten to producing energy naturally from the sun! (i.e., photosynthesis)

Please name an amazing high-potential founder you know, explain why you think he/she is amazing and list the contact information
Many of the people who have helped Ambient this far have big potential. They'll probably go on to do great things either in a startup or somewhere else!

How did you get to know about MiraclePlus in the first place? Via: (please choose and specify)
Institutions (such as VC, FA, research institutions, incubators, etc.) - NUS GRIP

What convinced you to apply to MiraclePlus? Did someone encourage you to apply?
My team

If applicable, please fill in your recommender's name. Recommender(s) may include MiraclePlus team members, , other investors, etc.
