- Solutions Flux D'IA Inc. has access and commercial rights to a platform it funded to develop for Ambient Systems Pte. Ltd.

IP Commercialization – Data Room & Action Plan

Brand Strategy

- Brand Guidelines used internally for public facing or internal facing materials
- Domains (owned)
- We do not sue other companies using Ambient Systems unless
- Free speech trumps brand strategy (employees, contractors, and customers) are free to speak their minds on a full range of topics as if not employed by the company

IP Policies

- IP Assignment:
  - All employees and interns must sign an IP assignment agreement or a clause must be included in their standard contract (paid or unpaid).
  - Contractors do not have to sign IP but they have limited access to the company data.
- Software:
  - No proprietary package are used.
  - Software versions are not updated automatically but only through a thorough review of the new libraries and licensing rules.
  - Frameworks, libraries, and packages must be pre-approved and vetted by technical committee and approved by shareholder.
- AI:
  - Content generated by AI using any company data belongs to the company

Business Model

- Consulting:
  - Civil Engineering
  - Energy Systems
  - Controlled Environment Agriculture
  - Intellectual Property and R&D
- Platform:
  - Subscription Plans
- IP Licensing:
  - Background IP: Paid to Ivan Damnjanovic (Citizen of Serbia).
  - Foreground IP: Paid royalties based to the companies or individuals on the terms of the specific agreement in place for the new IP.

IP – Pitch

What IP do I need from **others**?

- Software:
  - Standard code packages, libraries, and frameworks
  - Examples: C, Python, C#, JavaScript (React), SQL
  - Operating Systems (some open sourced and free)
- Know-How:
  - Electronics making skillsets and know-how

How does IP support the **value** of my venture?

1. **Defensibility**: a clear ownership identifies clear accountability for well-being of intentionally generated materials, whether IP or IP-related pre-IP knowledge (future IP), and requires a 'custodian' whether an entity, individual, or something else like a state. Also, for fundraising, it provides higher negotiation leverage for a lower dilution in Series A rounds and above.
2. **Scalability**: cloud-native digital preservation policies allow zero IP leakage in global expansion, transactions, and deal execution.
3. **(multiple paths to $):**
   - **Commercialization:** Sell platforms, products, and services that use this IP and make it clear that imitation is not an option.
   - **Sell IP:** sell IP to another owner or license them for revenue (cash)
   - **License**: receive recurring revenue for licensing and maintain the IP
   - **Tax (for company's other incomes)**: Tax deductible for revenues and any other income earned by the company, such as consulting or grants.
   - **Tax (for shareholders)**: Tax deductible for any income by any of its shareholders (in case of an individual shareholder exit)
