How many full-time cofounders the startup has?

1

Investment

Is your startup incorporated?

Yes

How much have you raised so far? (in USD)

100000

Are you raising now?

Yes

Description

Elevator pitch

Buildings contribute to 40% of global emissions. But, it will $9.2T per year to transition to net zero. We've made a product to help customers secure more green capital, quickly.

Which problem are you solving?

Decarbonizing commercial properties takes a lot of money. Underlying this challenge is that construction is estimated to contribute almost 40% of global emissions, $9.2 trillion is required per year to transition physical assets to net zero, and 81% of executives consider technology investments very important or extremely important. As we know, all this takes a lot of capital and is highly complex to allocate.

What is your solution/service/product?

Our product provides a data-driven way to evaluate eligible green building projects and technology projects for green capital. Data science can make it easy to allocate green capital. We propose to combine our data with the data from the property developer, which is either a BIM or BMS, and apply one of the latest machine learning techniques by our own data scientists. From there, developer gets one of three outputs to help them allocate green capital. This is either list of green building retrofits, , or matchmaking to available capital sources.

What is your business model?

The business model a white-label SaaS offering for Big 4 consultancies & Banks. Although we can sell the product directly to the customers we've spoken with, we've realized they need more than a software technology. They usually need guidance in different domains.

What is your competitive advantage?

The competitive landscape is highly congestive. Competitors focus on carbon data tracking. We start from where data is available and apply cutting edge data science.

Traction

What traction have you generated so far?

We've contacted over 570 industry professionals and conducted over 50 interviews to understand the market and test our hypothesis. During this time we've also launched the product MVP, which won a 1st runner up at a Google Cloud Hackathon in Singapore.

Program participation

What motivated you to apply to the Franklin Templeton Incubation program?

Referral by a fellow startup

Do you have currently a runway of at least 6months?

No

How long is your current runway?

Will you participate (overlapping dates) in another accelerator program during the same time as the Franklin Templeton Incubation program dates?

Yes

How have you heard about the Franklin Templeton Incubation Program?

Other, please specify: Referral by a fellow startup

Name the person who recommended you into the program, if any
