Google Forms

Thanks for filling out Google for Startups Accelerator Application

Here's what was received.

Google for Startups Accelerator Application

Thank you for your interest in our accelerator program! This application will help us assess your suitability for the program. Please be descriptive and ensure all links can be accessed by a representative from Google using an @google.com domain.

To receive an auto-generated email of the questions on this application form, email with the subject line: "Application Questions Request"

Data will be shared with relevant internal parties and external vendors that are necessary to make an informed decision about the program participants and/or conduct program. External vendors who process your data will do so based on our instructions and in compliance with our and other appropriate confidentiality and security measures. Data from non-accepted applicants will be kept for a maximum of 2 years unless a user specifically requests for deletion. Data from accepted applicants will be kept up to 2 years post-graduation.

You can request rectification or deletion of any personal data held by Google in connection with the Accelerator program by writing to Google at the following email address: . Please allow up to 14 days for us to process your request.

All data is subject to Google's

(*http://www.google.com/policies/privacy/*).
Protect your privacy! Please do not include any sensitive personally identifiable information to your response.

About You

Full Name *

Ivan Damnjanovic

Email *

ivan@ambientsystems.ai

Preferred contact number *

65[redacted]

What is your role? *

CEO & Founder

Company Profile

Startup Name *

For NGOs, please enter the name of the organization

Ambient Systems

Legal Name of Startup Entity *

For NGOs, please enter the legal name of the entity

Ambient Systems Pte Ltd

Link to website *

Link to website

https://www.ambientsystems.ai/

When was your startup founded? *

Please use DD/MM/YYYY format.

For NGOs, please enter the date you were founded

05/07/2021

What is the address of your legal entity? *

Please provide the complete address of your company.

160 Robinson Road, 14-04

In what city is your startup headquartered? *

For NGOs, please enter the city of your HQ.

Singapore

In what country is your startup headquartered? *

For NGOs, please enter the country of your HQ.

Singapore

Describe your startup in one sentence *

For NGOs, please describe your organization in one sentence.

Applied AI for Cyber Physical Systems

What is your business model? *

B2B

What industry is most applicable to your startup? *

For NGOs, please select the most applicable industry for your organization

Software

Team

How many C-level and/or founding team members are full-time? *

One

Please share the name of your founder(s) and a short bio for each person. *

Ivan Damnjanovic is an engineer and computer scientist turned entrepreneur. Since 2016, he's been working on numerous technology startups across developed and emerging markets in Singapore, Indonesia, Nepal, Cambodia, and Canada. Ivan's contribution to the sustainable energy movement has been recognized by the London-based non-profit One Young World as well United Nations Youth Assembly in New York City.

Prior to pursuing entrepreneurship, Ivan worked at Deloitte Canada's Risk Advisory practice in Toronto, covering consulting and audit engagements with major banks, mining, and oil companies. Ivan holds a bachelor's degree in civil engineering from the University

of Toronto (2015) with a minor in sustainable energy and a master's degree in computer science from the National University of Singapore (2021).

How long have they been working as a team? *

Around one year full time and one year part-time

How many people does your company currently employ full-time? *

1

Business Description

What is the problem that you are solving? *

Much of the investments in new IoT and digital technologies goes under-utilized. This is particularly the case for 'traditional' industries that are undergoing digitization, namely construction, agriculture, mining, and power generation, among others. Making the problem more difficult is that many of these industries cannot easily shift to a more digital mode of operations, such as financial services and manufacturing, which are considered the pioneers in adoption of the early computing technologies in mid 1970s.

What is your solution to this problem? *

Our solution is not to sell digitization but analysis. Many companies in our chosen sectors are already doing extensive data analytics. They've already started on their digital transformation without fully realizing it. We want to incentivize them to drive further benefits across the business units through better utilization of their existing technologies. We think this can be done through a very simple and intuitive product offering that allows each industry to get most of the analytics they need in a simple, streamlined, and intuitive way.

Who are or might be your competitors? *

Our biggest 'competitor' is inertia and complacency. There are various AI platform providers out there, but we are unique because we provide industry-ready models and any necessary data expertise, rather than requiring the customer to assemble their own or hire a consultancy.

How is your solution different from your competitors? *

Our competitors have good AI technologies; however, they're not tailored for the industries that we focus on, such as mining, construction, and agriculture. Customers are often left on their own to assemble their in-house data science teams or hire an external consultancy to help them on this journey. This is still very much needed in many cases, but we propose for software to do much of the heavy lifting when it comes to analytics and let the teams and consultants focus on the interpersonal side of digitization.

What are your major product milestones for the next 6 months? *

We need to take our product from MVP/POC -type of prototype to a fully deployable enterprise ready solution to win our target customers (largely C-suite of top real estate development companies)

Primary and secondary target countries *

You may write in one or more countries, as applicable.

Singapore and regional economies

Who would be a typical user/customer? *

Construction contractors, real estate developers, facility management service providers, mining operators, and others. Usually we have to sell to the C-suite after getting primary user buy-in for the product.

If applicable, what was your customer growth rate over the last 6 months? *

Please provide a baseline and your current user base

We've launch the product formally through a Google for 2022 in Singapore, where our team won a first runner-up place. We've gotten very good feedback from users and investors since then, encouraging us to continue developing the product further so they could officially propose it to their senior management team for full-scale pilots and adoption

Finance

Since founded, how much funding has your startup raised? *

Please provide response in ***USD in Millions*** (e.g. USD$200,000 would be 0.2)

For NGOs, please enter the amount you have received in donations since being founded

.1

If you've raised funding who are your investors? *

For NGOs, please enter the name of your primary donors if applicable

National University of Singapore, Family & Friends

What is your startup's current valuation? *

Please provide response in USD using numbers only. *(Do not convert to millions.)*

For NGOs, please enter 0 if not applicable.

2

What is your company's monthly recurring revenue (MRR)? *

Please provide response in USD. *(Do not convert to millions.)*

For NGOs, please enter 0 if not applicable.

0

Looking back at the last 6 months, what was the primary revenue source for the company? *

For NGOs, please enter 0 if not applicable.

0

What is your startup's monthly burn rate? *

Please provide response in USD. *(Please do not convert to millions.)*

For NGOs, please enter 0 if not applicable.

10000

Product

Which Google products are you using? *

- [ ] Android

- [ ] Angular

- [ ] Identity
- [ ] Kotlin
- [ ] Maps
- [ ] Machine Learning on Google
- [ ] Tensorflow
- [ ] Payments
- [ ] Play Store

- [ ] Policy
- [ ] Web/Chrome
- [ ] YouTube
- [ ] Other:

Do you use machine learning today? If so, how? *

Yes, we're using plenty of machine learning to deliver the automated analytics to the customer

Please describe the main components in your system architecture. *

Using firebase for hosting, user authentication, and databases. API gateway for connecting external customer data requests and a file storage system for each user. We also have experimented with AI tools but decided to keep this process human-in-the-loop for now so we're using Google Colab Notebooks with some models deployed on the GCP.

During the program, startups will identify a specific product or tech problem that they wish to solve. What problem would you be looking to solve during the accelerator? *

We need to take the current award-wining MVP to a enterprise-ready and build the data engineering and model deployment pipeline for the customized industry models.

Please provide us with your latest pitch deck or executive summary in English. *

Ambient Logo_Colour-03 - Ivan Damnjanović.svg

Provide 1-2 sentence description of your company.

Additional Team Question

2-minute Video Introduction of Co-founders and Elevator Pitch *

Please upload a 2-minute video presenting your startup. Please keep in mind that we want to meet you, not see a demo of your product! You can use any camera--nothing fancy or technical is necessary--and tell us what your startup is all about and who you are. We want to know about your market, your team, your stage of product development, your next challenges, and any additional information you find important and want to share. Please note that there is no need to invest more than the minimal effort in filming and editing. We care about learning what your startup is all about; we don't really care about your video editing skills.

Additional Information

How did you hear about this program? *

Please be sure to share your referral source, if applicable.

Google for Startups newsletter

Why are you interested in joining this program? How can Google help? *

We've had good experience through a recent Google Cloud for Startups Hackathon in Singapore and being a part of the Google for Startups programme. We need help to take this product further to the market as stakeholders and customers have requested something more enterprise-ready to engage in pilot and adoption discussions

Please list any past accelerator or startup program participation.
