Your Answers

1 Your Full Name

Ivan Damnjanovic

2 Your Title

CEO and Founder

3 Your email address

ivan@ambientsystems.ai

4 Your phone number

[redacted]

5 List your management team, names and roles

Ivan Damnjanovic, Director

6 Company Headquarter location

Singapore

7 What type of entity is your company?

Private Limited

8 Year launched

2021

9 Website

www.ambientsystems.ai/

10 What is the stage of your company?

Seed

11 Short company overview

Ambient Systems is a Singapore-based deep tech startup that provides a data science platform for financial transformation of smart cities. It provides the smart cities industry with tools, technologies, and services needed to drive financial transformation forward in one convenient, straightforward platform. The company's launch markets include urban agriculture (e.g., vertical farming) and the real estate & construction sectors. One of the use cases for REITs includes decarbonization tracking and modelling alongside other financial metrics.

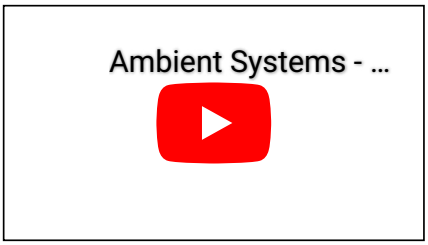

12 Overview of products/services

Ambient provides SaaS subscription for financial planning & analysis (FP&A) along with an add-on data-science-as-a-service subscription for additional analytics using client's multi-dimensional data

14 Please add a link to company's video

15 Please provide your 2020 revenue

16 Please provide your 2021 revenue

17 Please provide your 2022 revenue

$10

18 Please provide projected 2023 revenue

$100000

19 How much capital (in USD) has your company raised in total? Please list your main investors and type of investment

$100k USD: National University of Singapore, Family & Friends, Singapore Management University

20 What was your latest valuation?

$1000000

21 How much capital are you raising now?

$1000000

22 How much cash on hand does your company currently have?

$5000

23 What is your monthly gross and net burn rate?

$10000

24 Describe your business model and pricing structure.

We aspire to a simple business model yet there are many complexities of selling deep tech technology in a subscription model. We plan to go-to-market with a simple two-tier offering for SMEs (at $99/month) and enterprise users (at $999/month). We estimate that this number can grow up to $5,000/month and $200,000/month for SME and Enterprise users, respectively. The entry level product is a data science support tool for FP&A. The additional subscription services can provide new sources of revenue and differentiate Ambient from alternatives. For instance, we see a demand for more accessible and affordable data science as a service subscription that customers will find highly valuable. Similarly, we plan to provide customized add-on subscriptions for reporting tools (e.g., decarbonization for commercial real estate players) and IoT systems for industries that need more data.

25 Please list your main competitors

Cube, Forecastr, Teradata, Jirav, Stratify, Causal

26 What is your primary source of differentiation versus competitors?

More convenient data engineering support and data science as a service subscription with proprietary models.

27 What markets are you targeting and what is your go to market strategy?

Singapore Commercial REITs through direct outreach via our network

28 Please list some of your major clients and describe the type of engagement you have with them

We've engaged with several REITs players but have not converted them to a customer.

29 Please list all of your IP (Patents, Provisionals, Trademarks, etc.)

We have a published patent in a related industry vertical

30 Do you have any certifications or licenses? Please explain

31 Please describe your manufacturing infrastructure (hardware only)

No manufacturing involved

32 List awards and achievements.

Google Cloud Hackathon Singapore, 1st runner-up, CapitaLand Sustainability Competition (top 30 out of 300 global teams), graduate of numerous AI focused incubators from universities NUS, SMU, also part of Google Cloud for Startups programme as well as Microsoft's Founders Hub

33 Describe the resources you have to scale in the US market

We are enrolled in Google Cloud for Startups programme as well as Microsoft's Founders Hub. We're also establishing a partnership with industrial automation companies that operate in US markets. We also aim to leverage our personal network to connect with industry players.
