Most Companies Miss Their Financial Targets

90%

Miss Financial Targets

Companies fail to meet projections when operational data doesn't inform strategic planning

The Critical Gap

Across global industrial, energy, and financial sectors, a persistent challenge undermines strategic success: **operational data never fully informs strategic financial planning**. This disconnect creates missed opportunities, budget overruns, and strategic misalignment.

At Ambient Systems .IO, we bridge this financial-operational divide by delivering integrated advisory services that synthesize engineering precision, supply chain excellence, and high-tech product specification into cohesive, actionable strategies.

What the Market Actually Wants

Not SaaS

Another monthly subscription, another login, another dashboard nobody checks, another line item that gets cut when budgets tighten.

Not Platforms

Complex integrations, six-month onboarding cycles, training requirements, and vendor lock-in that makes procurement nervous.

Results

Tangible ROI in 30–90 days. Fixed-price engagements. Clear deliverables. Pay once, benefit immediately, move on.

The pivot wasn't about abandoning the technology—it was about packaging it in a way that removes friction, accelerates value delivery, and aligns payment with outcomes.

Our flagship project in Singapore (where we started:
First site project at launch: Singapore's Major Vertical Farm

24%

Crop Loss Reduction

Fewer rejected harvests, higher-quality output

18

Months to Payback

ROI achieved faster than projected

Our technology was tested at a client’s site in Singapore, delivering measurable, verifiable insights for improvements in crop yield and operational efficiency.

Introducing Ambient Systems . IO

Integrated Engineering & Strategic Advisory

Five years in competitive global markets—the patent foundation, the algorithms, the yield optimization models, the vendor networks—and restructured it into a consultancy that generates revenue from day one.

Same brain. Same IP foundation. Faster results. Higher margins. No subscriptions, no multi-year contracts, no platform integrations. Just fixed-price engagements that pay for themselves in the first month.

How It Works

Book a Free 30-Minute Call

We discuss your challenge, goals, and constraints. No sales pitch—just a diagnostic conversation to see if we're a fit.

Book here: calendly.com/ivan-ambient/io

Receive Fixed-Price Proposal in 48 Hours

Clear scope, defined deliverables, flat fee. You know exactly what you're paying and what you're getting before committing a dollar.

Get Results in 30–90 Days

Fast turnaround, tangible outcomes, and clear next steps. Most engagements pay for themselves in the first month.

What we offer

1

Civil & Energy Systems

Solar array design, microgrid optimization, building energy efficiency. Reduce operating costs by 15–30% through smarter infrastructure planning and vendor selection.

2

Vertical Farming / CEA Optimization

Layout design, yield modeling, environmental controls. Leverage patent-backed algorithms to reduce crop loss and accelerate payback on facility investments.

3

IP Strategy & Patent Support

Prior art searches, patent filing support, freedom-to-operate analysis. Protect your innovations without paying for BigLaw hourly rates and deterring copy-cats before court.

4

Supply-Chain ROI & Vendor Optimization

Sourcing strategy, customs optimization, vendor scorecards. Cut procurement costs and improve delivery timelines through data-driven supplier analysis.

Most engagements start between **€1,500–€3,500 fixed price**. No hourly billing. No scope creep. No surprise invoices.

You get a defined deliverable—a report, a model, a vendor scorecard, a patent search—delivered on time, with clear next steps. Typically, clients see payback within the first 30 days through cost savings, avoided risks, or accelerated timelines.

If the project requires ongoing work, we scope it separately. But most clients get what they need in a single engagement and move forward independently.

Key Team Members

- **Entrepreneur / Inventor** from Belgrade with almost 10 years of experience across Asia (Singapore, Nepal, Hong Kong).
- Track record scaling YC-backed startups and cross-border ventures
- *Languages: Native Serbian & English (fluent); Intermediate French*

Technical Lead & Systems Architect

Location & Availability

Hong Kong Until Mid-2026

Currently open in Hong Kong, available for remote engagements globally.

Belgrade After Mid-2026

Setting up operations in Belgrade to serve European clients and expand operations in the EU markets.

Regardless of location, all engagements are structured for seamless remote collaboration with optional in-person site visits as needed.

More Successful Projects

Geospatial AI Vision System: Automated Detection & Image Classification

The project delivered a fully documented and tested Artisanal Mining Detection System architecture and pipeline. The research successfully yielded a validated CNN image classification model. This deliverable provided the high-growth startup with the essential AI vision technology and technical framework necessary to automate detection and scale their geospatial analytics product for commercial use.

Global Regulatory Compliance & Data Consolidation (Conflict Minerals)

This was a maximum complexity project (4/4 rating) that successfully supported the client in meeting critical U.S. regulatory disclosure requirements. The delivery was executed under an urgent deadline (starting with one-day notice), and the work provided the foundation for their regulatory reporting, demonstrating strong technical ability and success in international data consolidation and high-stakes compliance advisory.

Advanced AI/ML Application Prototyping and IP Development

The project successfully delivered a validated, high-performance ML/AI prototype. The academic research and technical output were instrumental in securing pre-seed funding and formed the intellectual property (IP) foundation for a patented AI management system (WIPO: WO). This demonstrates proven expertise in taking complex theoretical models to a viable, commercial-grade technology asset.

Supply Chain Optimization for $2M in Solar Hardware Projects

Achieved 2x revenue growth while optimizing vendor terms and managed full customs clearance and dangerous goods shipping (lithium batteries) with zero delays, eliminating stock-outs and excess inventory issues.

Let's Make It Pay.

Five years of deep-tech R&D didn't disappear—it evolved into something clients will actually pay for. If you're running a farm, a facility, a supply chain, or sitting on IP you need to protect, let's talk.

First call is free. Proposal in 48 hours. Results in 30–90 days.
