Ambient Systems .IO

Inte
and

Turning complex industrial, energy, and deep-tech data into profitable, scientifically verified action plans. We leverage over eight years of global engineering and supply chain expertise to deliver high-impact, revenue-focused advisory services for C-suite and senior technical leaders.

Our Core Service Pillars

We deliver specialized advisory services across four distinct areas, ensuring clients receive tailored, high-confidence guidance from concept to execution. Each pillar combines technical rigor with commercial pragmatism, backed by proven global deployment experience.

Energy Systems & Sustainable Infrastructure

Optimizing clean energy solutions with technical and financial feasibility analysis

Vertical Farming (CEA)

Bridging crop science and operational efficiency for indoor farming operations

Civil Engineering Support

Providing critical pre-construction planning and technical documentation

Intellectual Property Strategy

Transforming technical inventions into protected, defensible assets

Energy Systems and Sustainable Infrastructure

This pillar focuses on optimizing and implementing clean energy solutions, built on experience sourcing solar hardware and delivering $2M in international projects across Asia. Our approach combines technical engineering rigor with sophisticated financial modeling.

Solar PV, Storage, and

We provide comprehensive technical and financial feasibility analysis for decentralized energy systems, including ROI assessment for battery storage integration and hybrid power configurations.

Building & Infrastructure Efficiency

Our team identifies key operational savings opportunities by applying civil engineering and building science principles to existing infrastructure.

Financial Modeling & Grants

We conduct robust Return on Investment calculations and support funding applications, optimizing proposals for cleantech grant programs.

on LEED certification pathways and emerging technologies including geothermal systems and green roof implementations.

Vertical Farming: Controlled Environment Agriculture

We bridge the gap between crop science and operational efficiency for indoor farming operations, providing end-to-end advisory from concept through operational optimization. Our approach leverages advanced IoT and AI technologies to maximize yield while minimizing resource consumption.

01

Concept & Layout Design

Developing optimized facility layouts for maximum yield density and resource efficiency

02

Yield & Energy Modeling

Creating accurate simulations to forecast crop output and energy consumption, critical for securing project financing

03

Climate & Controls Specification

Advising on smart sensors, IoT platforms, and AI-driven climate controls, leveraging expertise from building an advanced industrial platform

04

CAPEX/OPEX & IP Strategy

Strategic guidance on capital planning, operating costs, and protecting proprietary cultivation processes

Civil Engineering Support & IP Strategy

Civil Engineering Support

Leveraging foundational civil engineering expertise to provide critical pre-construction and planning support for large-scale development projects.

Drafting & Visualization

Producing precise technical drawings in AutoCAD and visual aids for planning and regulatory submissions

Bill of Quantities & Cost Analysis

Generating detailed material lists and comprehensive cost estimates for project budgeting and competitive bidding

Research Reports

Targeted reports on urban ecology and building science supporting development decisions

Intellectual Property Strategy

We transform technical inventions into protected assets, drawing on experience securing recognition from global IP bodies including WIPO.

Patent Searches & Strategy

In-depth searches and filing strategies to protect proprietary technology globally

Brand & Design Protection

Securing trademarks and industrial designs for exclusive legal rights to corporate identity

Creative Works Advisory

Guidance on copyrights and licensing for software, documentation, and technical content

Why Choose Ambient Systems .IO?

Our agency uniquely combines practical, hands-on global logistics experience with deep-tech R&D rigor. We don't just advise—we've executed complex international projects and built advanced technology platforms ourselves.

Proven Supply Chain Mastery

Strong track record in negotiating commercial agreements, managing full customs clearance, and handling dangerous goods shipping (lithium batteries) with zero delays. We've successfully navigated complex cross-border payments and multi-country tax filings.

Technical Authority

Strategic recommendations backed by deep-tech foundation, including experience developing a proprietary verification engine and leading R&D to Technical Readiness Level 6 (TRL 6). Recognized by , Google Cloud, and Panasonic.

Global Execution Capability

Demonstrated experience in international corporate consolidation and multi-jurisdictional compliance, covering SG, HK, QC, CA, and RS corporate laws. We understand the complexities of operating across borders.

Principal Consultant: Ivan Damnjanovic

Ambient Systems .IO is led by Ivan Damnjanovic, a seasoned supply chain professional and entrepreneur with over 8 years of experience in cleantech and deep-tech ventures.

Global Cleantech Focus

Extensive experience sourcing specialized solar hardware (inverters, lithium batteries) and managing complex cloud vendors, including delivering $2M of off-grid and hybrid solar systems across Asia.

Entrepreneurial & Technical Authority

Founder of Ambient Systems, driving an AI platform from concept to TRL 6. Gained recognition from , Google Cloud, and Panasonic. Holds a recognized patent for proprietary technology.

Strategic & Financial Acumen

Demonstrated success in managing complex statutory accounting, multi-country tax filings, and cash-flow management under multiple international corporate laws.

Educational Foundation & Credentials

BASc (Honours) Civil Engineering

1

University of Toronto • Sustainable Energy Minor

2

MSc Computer Science

National University of Singapore • Advanced computational systems

PhD Business Management

3

Currently pursuing • Strategic management and innovation

Ready to Transform Your Technical Challenges into Strategic Advantages?

Contact Ambient Systems .IO today to discuss how our integrated engineering and services can accelerate your clean energy, deep-tech, or industrial initiatives. We deliver scientifically verified, revenue-focused solutions backed by proven global execution.
