

Ambient Systems

Integrated technical expertise.

Turning five years of deep-tech R&D into specialized consulting that delivers direct results.

Based out of Belgrade with global operations and expertise across energy systems, vertical farming, IP strategy, and supply chain optimization.

SECTION OF DOCUMENT

Agency Overview

Integrated technical expertise across four high-value service lines.

Background

Offering expertise after five years of building an award-winning, PCT-patented NUS deep-tech AI technology startup that achieved technical readiness (TRL 6).

Our Mandate

- Industrial applications
- Streamlined FP&A
- R&D
- Software subscription (in developr

Service Lines:

1. **Civil Engineering & Energy Systems**
   Drafting and load calculations.
   Solar array design, microgrid optimization, building energy efficiency.
2. **Supply-Chain Management & Vendor Optimization**
   Sourcing strategy, customs optimization, vendor scorecards.
3. **Vertical Farming / CEA Optimization**
   Layout design, yield modeling, environmental controls.
4. **IP Strategy & Patent Support**
   Prior art searches, patent filing support, freedom-to-operate analysis.

Active on Leading Platforms: Upwork, Freelancer.com, Catalant, AlphaSights, and —connecting with clients who need immediate, specialized expertise.

End-to-End Climate Management Solution for Indoor Farming

Case study: Ambient Systems

SITUATION or BUSINESS CHALLENGE

Indoor farmers face significant crop loss and high operational costs due to the inability to maintain optimal climate conditions. Existing solutions are fragmented, manual, and labor-intensive, often leading to unmonitored temperature and humidity imbalances that promote mold and pests, ultimately reducing yield quality and quantity.

APPROACH TO SOLUTION

- Defined the **full-stack ML solution** (sensors, optimization engine, dashboard) and the scalable B2B SaaS + Hardware business model.
- Secured pilot **Letters of Intent (LOIs)** with two key vertical farm operators to validate demand and establish the initial pipeline.
- Developed the financial model projecting a **24% improvement in client margins** with a rapid **4-6 month customer payback period**.
- Produced all investment deliverables (Investment Deck, Business Plan) and defined the IP/patent strategy for the core optimization algorithm.

OUTCOMES ACHIEVED

- 24% ROI Model: Developed a model projecting a 24% improvement in client margins with a rapid 4–6-month customer payback.
- Validation: Achieved critical market validation and established a pipeline through secured commercial LOIs.
- IP Foundation: Defined the patent strategy for the core optimization algorithm.

Comparing case studies

Relevant Project Highlights

	Distributed Mining Company	Conflict Minerals	Image Neural Network
Challenge	Uncontrolled OpEx (Energy Costs). No link between real-time operational data and financial planning; resulting in reactive procurement.	Urgent SEC 3TG Conflict Minerals disclosure. Major pharmaceutical client required rapid compliance under a tight regulatory deadline.	Startup needed a robust, high-accuracy AI vision model to automatically detect artisanal mining by analyzing satellite imagery across complex biomes.
Action	Developed Big Data predictive OpEx models using operational and market data. Integrated models for real-time cost visibility at site level.	Led data analysis and consolidated raw data from 20+ international offices.Advised on compliance risk mitigation for SEC disclosure requirements.	Led as Principal Investigator (PI). Designed and implemented Convolutional Neural Network (CNN) models. Developed an automated data collection and prediction pipeline.
Result	12% sustained reduction in global energy costs, achieving millions in OpEx savings.	Successfully met critical U.S. regulatory disclosure. Delivery executed under urgent, one-day notice.	Delivered a validated CNN image classification model and system architecture.

Results achieved personally at prior ventures.

Our approach

Transparent Pricing

Book a Free 30-Minute Call

- We discuss your challenge, goals, and constraints. No sales pitch—just a diagnostic conversation to see if we're a fit.

Receive Fixed-Price Proposal in 48 Hours

- Clear scope, defined deliverables, flat fee. You know exactly what you're paying and what you're getting before committing a dollar.

Get Results in 30–90 Days

- Fast turnaround, tangible outcomes, and clear next steps. Most engagements pay for themselves in the first month.

Most engagements start between **€1,500–€3,500 fixed price**. No hourly billing. No scope creep. No surprise invoices.

You get a defined deliverable—a report, a model, a vendor scorecard, a patent search—delivered on time, with clear next steps.

Typically, clients see **payback within the first 30 days** through cost savings, avoided risks, or accelerated timelines.

Let’s bring the tech to you.

Ivan Damnjanovic

Founder, Technical Lead & Systems Architect

Entrepreneur and inventor from Belgrade with 10 years of experience across Asia (Singapore, Nepal, Hong Kong). Track record scaling YC-backed startups and cross-border ventures.

Languages: Native Serbian & English (fluent); Intermediate French

Current: Based in Belgrade with global operations in Hong Kong, available for remote engagements globally.
Future: Centralizing global operations in Belgrade after mid-2026 to serve European clients.
