

Ambient Systems .IO

Integrated Engineering & Strategic Advisory

Turning five years of deep-tech R&D into high-margin consulting that delivers measurable results. Based in Belgrade with global operations and proven expertise across energy systems, vertical farming, IP strategy, and supply chain optimization.

From Deep Tech to Real Impact

The Journey

For five years, I bootstrapped an AI SaaS platform for industrial facility automation—taking a university invention from my NUS MSc to TRL 6, filing a PCT patent, and earning , Google Cloud, and Panasonic IP recognition.

The technology was validated. The accolades were real. But commercial traction at scale never materialized.

The Evolution

In June 2025, I halted commercial operations and commenced formal wind-down of international entities. The IP, code, and know-how remain intact—now available through something more immediate and profitable.

Ambient Systems .IO delivers high-margin, immediate-impact consulting that pays for itself within 30 days.

Four Core Service Lines

Civil & Energy Systems

Solar array design, microgrid optimization, building energy efficiency.

Reduce operating costs by 15–30% through smarter infrastructure planning and vendor selection.

Vertical Farming / CEA Optimization

Layout design, yield modeling, environmental controls.

Leverage **patent-backed algorithms** to reduce crop loss and accelerate payback on facility investments.

IP Strategy & Patent Support

Prior art searches, patent filing support, freedom-to-operate analysis.

Protect your innovations **without BigLaw hourly rates** and deter copy-cats before court.

Supply-Chain ROI & Vendor Optimization

Sourcing strategy, customs optimization, vendor scorecards.

Cut procurement costs and improve delivery timelines through data-driven supplier analysis.

Proven Results Across Industries

24%

Crop Loss Reduction

Vertical farming client in Singapore achieved measurable improvements in yield and quality

18mo

Payback Period

ROI realized through real-time operational efficiency improvements

2x

Revenue Growth

Supply chain optimization for $2M solar hardware projects with zero shipping delays

Our technology has been tested at client sites, delivering verifiable insights that translate directly to bottom-line improvements. From geospatial AI vision systems for mining detection to advanced ML prototypes securing pre-seed funding, we've consistently delivered validated, commercial-grade technology assets.

Recent Project Highlights

1

Vertical Farm Optimization — Singapore

Delivered measurable, verifiable insights for crop yield and operational efficiency improvements. Technology tested on-site produced 24% reduction in crop loss, 18-month payback, and real-time farm operations efficiency gains.

2

Geospatial AI Vision System

Delivered fully documented Artisanal Mining Detection System architecture with validated CNN image classification model. Provided high-growth startup with essential AI vision technology to automate detection and scale geospatial analytics product for commercial use.

3

Advanced AI/ML Prototype & IP Development

Delivered validated, high-performance ML/AI prototype that secured pre-seed funding and formed IP foundation for patented AI management system (WIPO: WO). Demonstrated expertise taking complex theoretical models to viable, commercial-grade technology assets.

4

Global Regulatory Compliance — Conflict Minerals

Maximum complexity project (4/4 rating) supporting U.S. regulatory disclosure requirements. Executed under urgent deadline (one-day notice start), provided foundation for regulatory reporting with international data consolidation and high-stakes compliance advisory.

Who This Is For

Facility Operators

Running indoor farms, warehouses, or controlled environments where efficiency and uptime are non-negotiable. In a market where only 51% of indoor farms are profitable, optimization isn't optional.

Corporate Buyers

Managing procurement, sourcing, or vendor relationships and looking for data-driven optimization. Achieve 0.5–1.5 year payback periods through strategic vendor management.

Entrepreneurs & Investors

Sitting on IP you're not sure how to protect, commercialize, or defend against prior art challenges. Get expert guidance without BigLaw rates.

Active on Leading Platforms: Upwork, Freelancer.com, Catalant, Guidepoint, and GLG Insights—connecting with clients who need immediate, specialized expertise.

How It Works

Book a Free 30-Minute Call

We discuss your challenge, goals, and constraints. No sales pitch—just a diagnostic conversation to see if we're a fit.

Receive Fixed-Price Proposal in 48 Hours

Clear scope, defined deliverables, flat fee. You know exactly what you're paying and what you're getting before committing a dollar.

Get Results in 30–90 Days

Fast turnaround, tangible outcomes, and clear next steps. Most engagements pay for themselves in the first month.

Transparent Pricing

Most engagements start between **€1,500–€3,500 fixed price**. No hourly billing. No scope creep. No surprise invoices. You get a defined deliverable—a report, a model, a vendor scorecard, a patent search—delivered on time, with clear next steps.

Typically, clients see **payback within the first 30 days** through cost savings, avoided risks, or accelerated timelines.

Let's Make It Pay

Ivan Damnjanović

Founder, Technical Lead & Systems Architect

Entrepreneur and inventor from Belgrade with almost 10 years of experience across Asia (Singapore, Nepal, Hong Kong). Track record scaling YC-backed startups and cross-border ventures.

Languages: Native Serbian & English (fluent); Intermediate French

Current: Hong Kong until mid-2026, available for remote engagements globally
Future: Belgrade operations after mid-2026 to serve European clients
