

The Deep-Tech Dream Evolved Into Something That Actually Pays

Welcome to Ambient Systems .IO — where five years of patent-backed innovation meets immediate, profitable impact for industrial, energy, and deep-tech firms.

From Invention to Evolution

The Foundation

Five years ago at NUS, I founded Ambient Systems on a breakthrough AI platform for building automation. Real technology. Real results:

- 24% reduction in crop loss at SinGrow Singapore
- 0.5–1.5 year payback through real-time control
- PCT patent WO A1 filed
- recognition
- Google Cloud credits and Panasonic IP validation
- Technology Readiness Level 6 achieved

The Pivot

After navigating four jurisdictions and exhausting capital on the global SaaS dream, I halted commercial operations in June 2025. But here's what didn't stop: the expertise, the IP, the algorithms, and the know-how that impressed WIPO and Panasonic.

Now it's available through something simpler and more profitable: high-margin consulting that delivers immediate impact. The deep-tech foundation remains — it's just evolved into a model that pays from Day 1.

Four Core Services, One Mission: Profitable Action

Civil & Energy Systems

Solar array design, microgrid optimization, building energy efficiency

Impact: 15–30% reduction in operating costs

Starting at: €1,500

Vertical Farming / CEA Optimization

Layout design, yield modeling, environmental controls

Impact: Reduced crop loss, accelerated payback

Starting at: €2,500

IP Strategy & Patent Support

Prior art searches, patent filing support, freedom-to-operate analysis

Impact: Protect innovations without BigLaw rates

Starting at: €2,000

Supply-Chain ROI & Vendor Optimization

Sourcing strategy, customs optimization, vendor scorecards

Impact: Cut costs, improve delivery timelines

Starting at: €2,000

This Isn't Theory — It's Battle-Tested Expertise

1

Deloitte — Enterprise Risk & Compliance

Delivered enterprise risk frameworks and compliance solutions for Fortune 1000 clients, building foundation in operational excellence and strategic advisory

2

SunFarmer & Okra Solar — Supply Chain Leadership

Managed $2M+ projects with zero customs delays on dangerous goods, eliminated stock-outs, drove 2× revenue growth through performance scorecards across 8+ years

3

NUS — MSc Computer Science & Invention

Developed patent-backed AI platform for building automation, achieved TRL 6, earned WIPO recognition and corporate validation from Panasonic

4

Ambient Systems — Integrated Advisory

Transforming industrial, energy, and deep-tech data into profitable, compliant action plans with immediate ROI

Real Results That Pay for Themselves

24%

Crop Loss Reduction

Delivered at SinGrow Singapore through patent-backed real-time control algorithms

40%

Lithium Sourcing Savings

Typical procurement cost reduction through data-driven vendor optimization

30%

Energy Cost Reduction

Maximum operating cost savings through smarter infrastructure planning

0.5–1.5

Years to Payback

Typical ROI timeline on facility investments with optimized controls

Why This Works

Most engagements pay for themselves in Month 1. The combination of patent-backed algorithms, 8+ years of supply-chain expertise, and proven civil engineering fundamentals means you're not buying consulting hours — you're buying immediate, measurable savings.

The Foundation

Every recommendation is built on the same IP that earned recognition, the same operational rigor that delivered $2M projects with zero delays, and the same technical depth from a UofT Civil Engineering degree and NUS MSc in Computer Science.

How It Works: Simple, Fast, Profitable

Step 1: Discovery

Book a free 30-minute call. We map your challenge, identify quick wins, and determine if there's a fit. No obligation, no pitch — just honest assessment.

Step 2: Proposal

Receive a fixed-price proposal within 48 hours. Clear scope, clear deliverables, clear timeline. You know exactly what you're getting and what it costs.

Step 3: Results

Implementation and results delivered in 30–90 days. Most clients see ROI in Month 1 through immediate cost savings or operational improvements.

Ready to start? DM or book directly at calendly.com/ivan-ambient/io — first call is free, proposal in 48 hours, results in 30–90 days.

Who This Is For

Industrial Operators

Running facilities that need to cut energy costs, optimize processes, or improve environmental controls without massive CapEx investments.

- Building managers
- Plant operators
- Energy managers

Deep-Tech Innovators

Sitting on IP that needs protection, validation, or strategic positioning before the next funding round or partnership discussion.

- Hardware startups
- Research spin-outs
- Tech entrepreneurs

Supply-Chain Leaders

Managing procurement across complex international networks and need to reduce costs, improve vendor performance, or eliminate customs delays.

- Operations directors
- Procurement managers
- Logistics heads

If you're running a farm, a facility, a supply chain, or sitting on IP you need to protect — and you want results measured in saved dollars and shortened timelines, not consulting decks — let's talk.

Let's Make It Pay

> "The deep-tech dream isn't over. It's just evolved into something that actually pays."

Ivan Damnjanović

Founder, Ambient Systems .IO

BASc Civil Engineering (UofT) | MSc Computer Science (NUS) | Ex-Deloitte | Ex-SunFarmer/Okra Solar

Based in Belgrade from 2026

Currently operating from Toronto until mid-2026, with global experience across Singapore, Hong Kong, and Eastern Europe.
