REDACTED

November 5, 2020

Dear REDACTED,

Thank you for your interest in Ambient's climate management solution for indoor farms. At Ambient, we understand that managing the indoor environment can be a complex and time-consuming process. We want to make this easier for you by providing a comprehensive solution that handles all of your building management activities, allowing you to focus on your business.

As a deep-tech spin-off from National University of Singapore, Ambient's goal is to build solutions that will support urban farm operators with meeting their climate needs by leveraging technological advances in Internet-of-Things (IoT) and Machine Learning (ML). We propose to work together with REDACTED on developing a climate management solution for your fleet of indoor farms. The motivation for this joint project is two-fold. First is to provide the necessary technology to effectively manage the indoor climate. Second is to leverage the collected data to develop a more precise method of indoor farming to achieve greater yield, higher quality, and more accurate harvest time predictions.

Scope of Work

Ambient's international team of engineers, software developers, and management consultants will help you obtain the most appropriate climate management solution for your needs.

The following services are offered as part of the overall solution:

1. **with a farm operator in Singapore**
2. **In conversation with two more leading farm operators**
3. **Received validation for a similar solution in the healthcare sector**

AMBIENT SYSTEMS
Climate At Your Service

About Us

Technology

- **MComp, Computer Science**
  National University of Singapore
- **BASc, Civil Engineering, Sustainable Energy**
  University of Toronto
- **Serial Entrepreneur**
  5 years experience in cleantech, deep tech

, Finance
Singapore Management University

- **Strategy and Fundraising**
  3 years experience across
  e-commerce, gaming and payments

AMBIENT SYSTEMS

Climate At Your Service

1. Identified product-market fit as smart building technology provider for Indoor Farms

2. Competitive offering and IP through aggregating use-case specific data

3. Confirmed pilot project with farm operator
