AI-driven Smart Cities

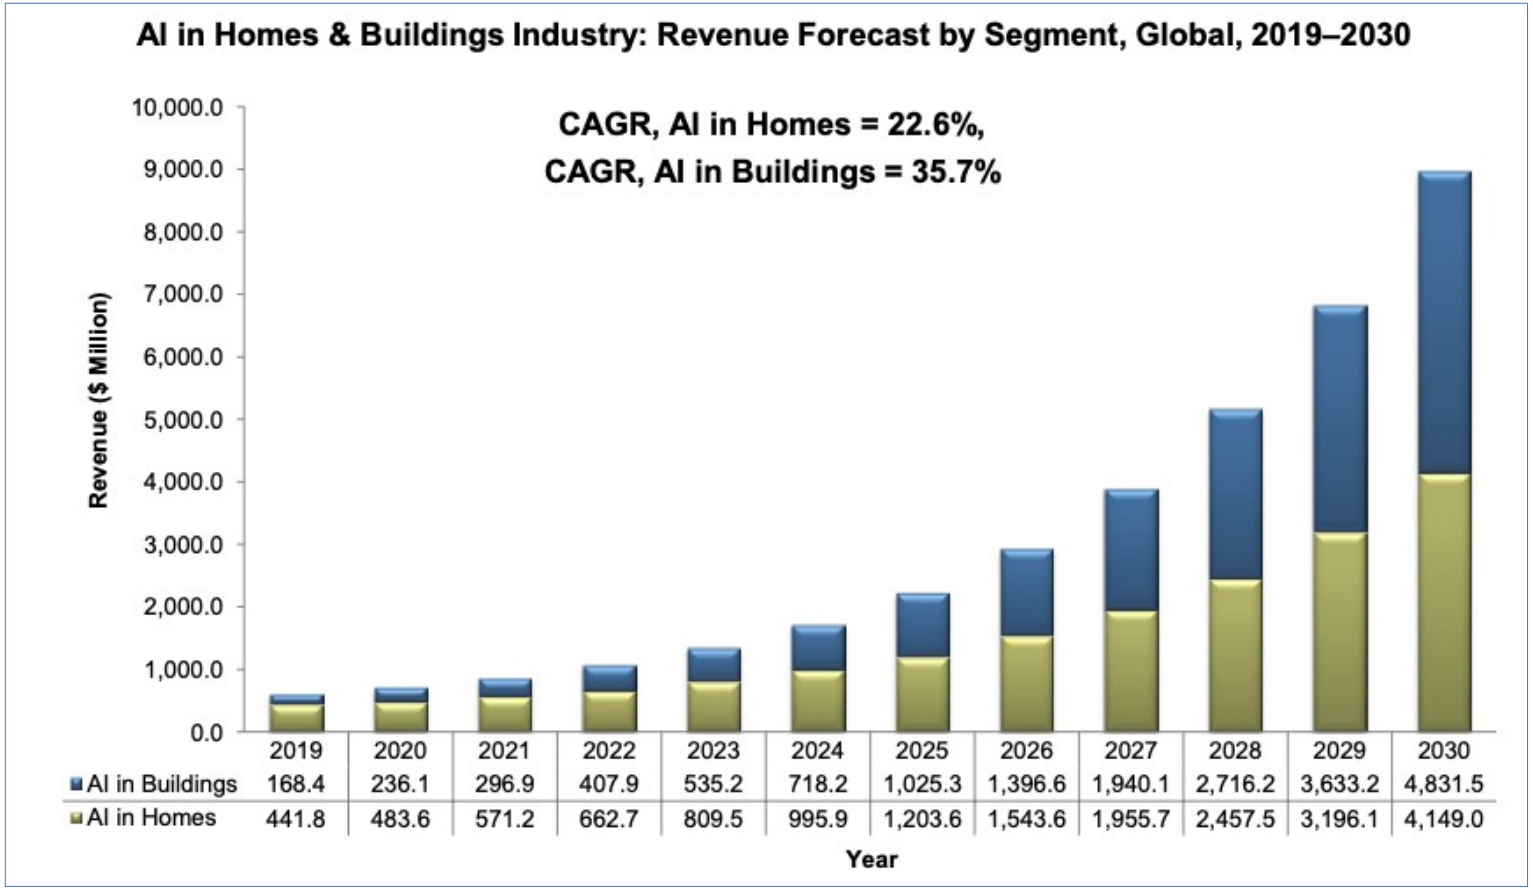

Business Plan Slides

AI/ML Market: $35B growing at 42% CAGR

Revenue Forecast—AI/ML Market

AI Solutions for Smart Buildings

2021 Market Size: $570M
2026 Market Size: $1,400M
CAGR: 36%

25 to 30 companies in the market
Top 5 participants hold 66.3%

Top AI Applications

- Predictive Maintenance
- Building
- Building Process Optimization
- AI-based Optimization
- AI-based Power Trading
- AI-based Lighting Control

Differentiation: Drivers

Driver	Importance	Others	Ambient
Demand for value-driven solutions	H	Mostly focused on energy reduction	Balances competing priorities, such as energy reduction with indoor air quality and productivity
Cost Reduction due to	H	Considers only energy costs	Customers can expect savings by 25% to 35% in terms of not just utilities but also man hours
Increasing Penetration of Transformative Technologies in Buildings	H	Closed hardware or no support for new technologies	Open APIs while consulting the customer on other tech components, including sensors, BMS, and equipment
Government Push for AI Solutions	H	?	Aligned with Singapore government deep tech initiatives
Increasing Awareness on AI-driven Solutions	M	?	Provides online content and thought leadership on the AI-driven solutions

Differentiation: Restraints

Restraint	Importance	Others	Ambient
High CAPEX	H		Customers can start w existing hardware Sensors are optional (if necessary) Modular AI development Fast & simple deployment
Uncertainty of ROI	H		
Cybersecurity	H	?	Add security in design stage Secure default settings Authorization controls Firewalls Stronger end-to-end encryption Threat prevention monitoring
Poor Data Quality	M	?	Efficient data acquisition
Lack of interoperability	L	Closed systems	BACnet compliant Open APIs

AI–Timeline of Adoption

AI, with its machine learning and deep learning features, is key for transforming smart buildings to cognitive buildings.

AI in Homes & Buildings Industry: Timeline of AI Adoption, Global, 2019

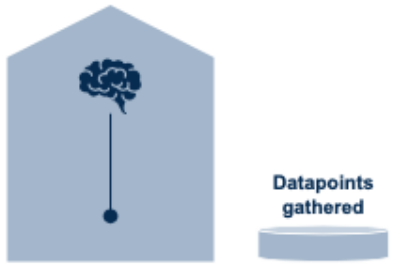

<1980 >2019

Evolution of Building Management
Cognitive buildings to autonomously learn systems and user behaviour to optimise performance

Man-Machine Intelligence Continuum

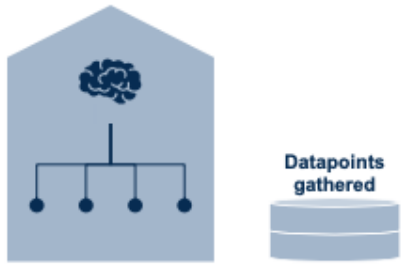

Automated Buildings (1980–2000)

Visualise KPI
- Identify general issues

Assisted Intelligence
- Nature of tasks does not change
- Tasks are automated
- Humans do not learn
- Machines learn
- Examples: Machinery, processes in factories, boilers, ovens

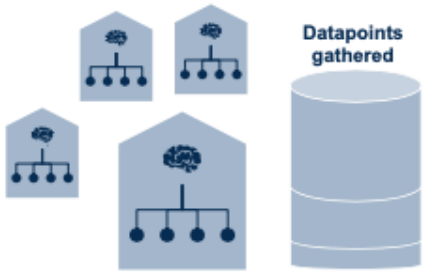

Smart Buildings (2000–2019)

Analyse Energy Consumers
- Understand energy consumption by analysing primary datapoints

Augmented Intelligence
- Nature of tasks changes
- Humans inform machines
- Machines inform humans
- Examples: Predictive maintenance and building performance optimisation

Cognitive Buildings (>2019)

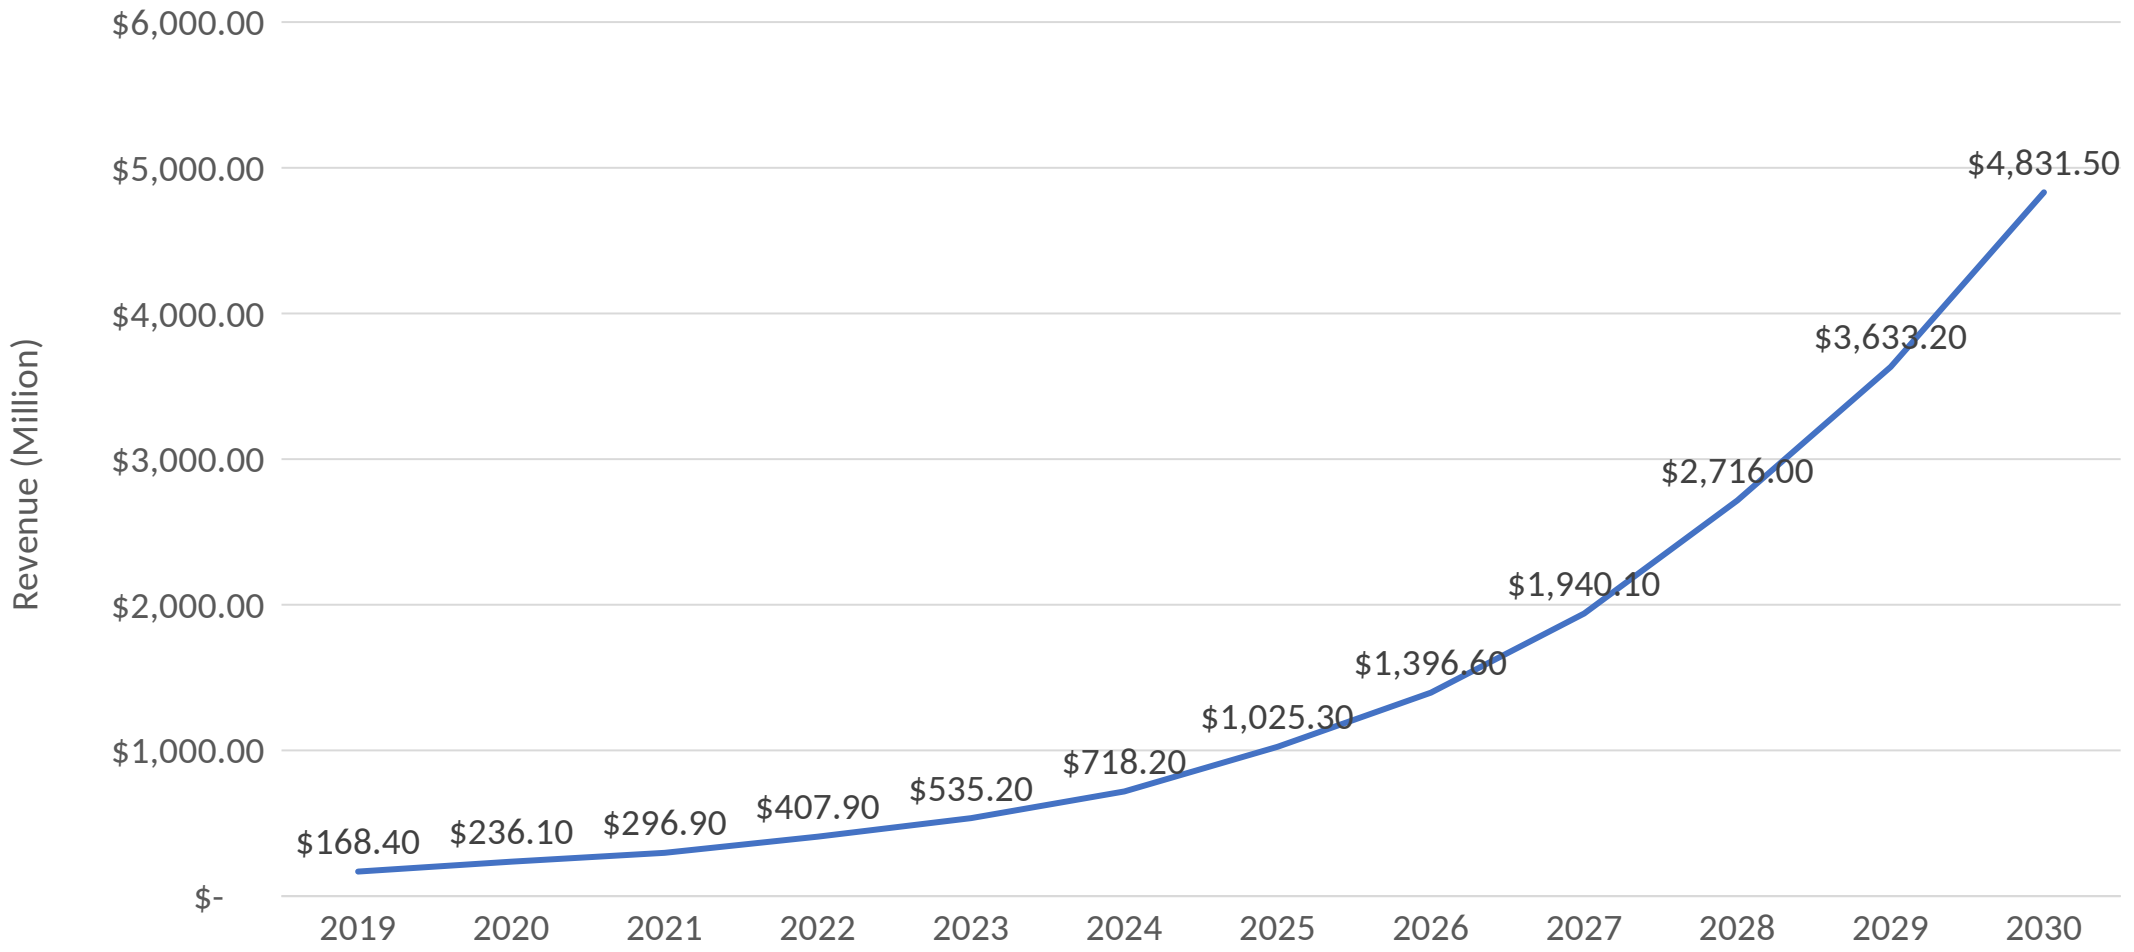

Learn Behaviour
- Personalised control at occupant's level
- Understand energy flow and building occupancy
- Consider occupant comfort
- Collect external datapoints

Autonomous Intelligence
- Nature of tasks changes
- Decisions are automated
- Machines learn continuously
- Example: Digital twin-enabled smart building platform

Top AI Companies to Watch

Leading participants of building technologies.

Company	Growth	Innovation
SIEMENS	Siemens Smart Infrastructure drives the digital transformation of the buildings industry by creating open-standards-based Building Information Modelling (BIM)-ready products and services and by connecting its products and installed base to the new digital offerings of Siemens Comfy and Enlighted in the smart space area. Siemens' global team of data scientists are involved in the development of a next-generation AI platform for data-driven applications as a part of the company's digital services.	Siemens' MindSphere platform collects data from numerous factory and industry equipment and provides digital solutions such as remote diagnostic services, performance optimiser, remote maintenance, and digital whiteboard. The company might leverage this experience and develop a new data-driven application for smart buildings in collaboration with IBM.
Honeywell	Honeywell's building technologies (HBT) business in the non-residential segment is expected to continue its strong performance in the commercial fire safety domain and record modest growth in security solutions. Honeywell, after the spin-off of its homes business, Resideo, is well-positioned to grow profitably, with a 23% margin target by 2023.	Honeywell has announced the launch of Honeywell Forge Energy Optimization, a cloud-based, closed-loop, machine learning solution that studies the pattern of building energy consumption and continuously optimises building assets for improved energy efficiency without compromising on occupant's comfort.
Signify	Signify's light-emitting diode (LED)-based sales reached 78% of its total revenue, growing at a rate of 2.7% in 2019. LED-based sales are estimated to account for 85% of Signify's total sales in 2020, and its connected light points installed base is expected to exceed 65 million in 2020.	Signify will continue to strengthen its growth in data-enabled services by delivering IoT-based lighting solutions. Indoor and outdoor segment customers will benefit from the Interact IoT platform that leverages AI to deliver cost and operational efficiencies.
AcuityBrands.	Acuity Brands is the leading participant in the LED and non-LED luminaire market in the Americas, with 85% of its sales coming from the non-residential segment and 15% from the residential segment.	Acuity Brands' integrated package includes the Atrius sensory network, the building OS platform, and the Atrius platform that has been deployed for 320 million sq,ft. of space.

Top AI Companies to Watch (continued)

High-performing and emerging companies.

Company	Growth	Innovation
ECOENERGY INSIGHTS	For EcoEnergy Insights, 2019 was an exceptional year in terms of both organic growth and product innovation. Frost & Sullivan recognised the company's efforts and awarded it for demonstrating growth, innovation, and leadership in the global BEMS market. The company is expected to continue its strong performance in 2020.	EcoEnergy Insights' CORTIX platform has been upgraded to serve 19 categories of building equipment in different end-user verticals. Overall, 150,000 equipment are connected to the CORTIX platform. The platform's base engine is AI- and ML-driven, providing Insights-to-Action and, thereby, creating value for customers. More updates are expected in 2020.
FOGHORN	FogHorn ensures that its current product line and future road map remain relevant to its customers. The company focusses on improving the performance value for clients through an efficiency value play strategy. FogHorn has a dedicated global customer service team, with strong presence in Japan, Korea, Saudi Arabia, and the United States.	FogHorn leverages its industry-leading edge analytics capabilities by introducing features to its smart building AI solutions that include air quality monitoring, facial recognition with deep learning, video-based security surveillance for increased comfort and safety, and early water pump failure detection through sensory functionality.
75F	75F raised $18 million in Series A funding in 2019, led by Breakthrough Energy Ventures and Oil & Gas Climate Initiative. This funding will help the company invest in research and development (R&D) for product innovation and strengthening its partner network in North America, Middle East, and Asia-Pacific (APAC). The company expects to register more than 100% growth in 2020.	75F's self-learning building intelligence system improves a commercial building's operational efficiency and occupant experience by proactively controlling the HVAC, indoor air quality, and lighting settings based on inputs from sensors, weather data, and configuration settings and predictive algorithms powered by machine-to-machine (M2M) engine and cloud-computing data storage and processing power.

Top AI Companies to Watch (continued)

High-performing and emerging companies.

Company	Growth	Innovation
BRAINBOX AI	BrainBox AI has been growing at lightening speed. The company, which was working with less than half a million square feet in early 2019, hit 10 million by the end of the year. Currently, it manages around 18 million sq.ft. of space including retail spaces, offices, hotels, schools, warehouses, datacentres, hospitals, and grocery stores.	BrainBox AI's Artificial Intelligence engine uses advanced predictive control strategies with ML techniques that can self-learn a building's operating behaviour and energy flows and analyse and instruct the HVAC system to operate more efficiently, thereby reducing operating costs and carbon footprints significantly.
uplight	Tendril and Simple Energy merged as Uplight, with 75 North American utilities as customers. Earlier, Tendril had been on an acquisition spree, taking over EEme, an energy disaggregation start-up; EnergySavvy, a residential customer engagement software company; and FirstFuel Software, an energy efficiency data analytics company.	Uplight's combined business capabilities is a three-step process: engage, activate, and orchestrate. The first step is covered by Tendril's customer home energy reports and online interactions; the second step is covered by Simple Energy's software tools and management platforms to convert passive customers to active customers; and the third step is covered by Tendril's data analytics capability.
sense	Sense raised $18 million in fresh funding from investors led by Schneider Electric and including Shell Ventures, iRobot, Energy Impact Partners, Prelude Ventures, and Capricorn Investment Group. The company has partnered with 50 solar installers in more than 24 states in the US and Canadian provinces where home owners are embracing solar power.	Sense uses high-resolution data to detect small changes in magnitude, phase, and frequency and then incorporates machine learning algorithms to distinguish one appliance from another. The Sense Home Energy Monitor will be compatible with Google Assistant and the Belkin Wemo Insight Plug and TP-Link Kasa HS110 smart plugs in 2019.

Source: Frost & Sullivan

Top AI Companies to Watch (continued)

High-performing and emerging companies.

Company	Growth	Innovation
BuildingIQ	BuildingIQ has been recording a CAGR of more than 20% since 2015 in the global BEMS market. Of late, the company has been busy expanding its partner network. BuildingIQ has raised a total of $6.5 million since it announced its capital raising in 2017. The company has an established market presence in the US, especially for large building portfolios.	BuildingIQ provides energy management solutions through its 5i energy intelligence AI platform for a wide range of buildings. Its solutions include a suite of services such as visualisation, building operations, and predictive control. The platform learns and evolves with existing building management systems and customer needs.
PointGrab	The Israeli smart building management company, PointGrab is an emerging firm that has been growing at an accelerated rate over the past few years. The company is backed by Signify, ABB Technology Ventures, and Mitsubishi Capital. It partners with Gooee for smart lighting, Serraview for connected workplace, and Tyco (now part of JCI). PointGrab has access to a large customer base through its partners.	The CogniPoint AI-based smart sensing platform is a combination of occupancy sensors and cloud management system. The occupancy sensors continuously send workplace occupancy data to the cloud management system, which in turn shares the data with a third-party building management system for overall building performance optimisation.
smappee	The Belgian home energy monitoring start-up, Smappe is estimated to have recorded a CAGR of more than 50% since 2015 in the home energy management systems (HEMS) market. The company's products are compatible with those offered by most of the connected home solution providers such as Google, Amazon, Varta, Niko, Netatmo, Daikin, Tado, and Signify. The company's products support IFTTT, Conrad Connect and MQTT, OCPP, Modbus, Bluetooth, KNX and more protocols.	The AI-based home energy monitoring device detects every appliance for energy consumption and generation through the incorporation of machine learning algorithms. The home energy monitoring system consists of hardware devices for tracking electricity, gas, and water consumption. It is installed in the breaker panel or on appliances to track energy consumption and energy anomalies of appliances via a dashboard application.

Source: Frost & Sullivan

Top AI Companies to Watch (continued)

High-performing companies.

Company	Growth	Innovation
CURB	Energy Curb, a US-based home monitoring start-up, has been growing at an accelerated rate over the past couple of years. The company has partnered with Schneider Electric to integrate its home energy monitoring product with Schneider's Square D smart load breaker panel, a modular product. This partnership has helped Schneider Electric enter the home energy management market and allowed Energy Curb to expand its customer base.	The AI-based home energy monitoring device detects every appliance by incorporating machine learning algorithm. The product is a hardware device installed in the breaker panel and a mobile application to track energy consumption and energy anomalies of appliances.
VELUX	The Danish company is one of the leaders in roof windows, skylights, and intelligent home controls. In 2017, the company partnered with Netatmo to offer an indoor climate control solution to its residential customers. Frost & Sullivan considers it as a highly impactful, value-driven, AI-based solution available in the residential market.	Velux ACTIVE is an indoor climate control solution that includes a Wi-Fi gateway and smart controls for Velux INTEGRA roof windows and sunscreening products. The solution incorporates a machine learning algorithm for ventilation and blind control.
VATTENFALL	Vattenfall continues to invest significantly in renewable production. An investment of about $2.46 billion is planned for wind farms, of which 75% is for offshore wind farms. The company is also investing $100 million in solar and battery projects and another $170 million in distribution network solutions and decentralised heat solutions. The company has bought 100% shares of Senfal and is adding new services for industrial demand-side flexibility and renewable generation optimisation.	Vattenfall's acquisition of Senfal has made it one of the very few companies offering autonomous demand response and power trading solutions. Senfal's AI algorithm enables renewable energy operators and large industrials to optimally use their assets, and the platform makes autonomous decisions on energy markets.
