Ambient Smart Homes

Making Products for Healthy Homes

Market Opportunity

Most smart home products focus on two things: managing temperature and automating
basic appliances, overlooking the most important function of our homes.

Providing a healthy and safe living space depends significantly on the quality of indoor air.

Current alternatives fall short in three main ways:

1. Inaccurate
2. Measure only one point
3. Do not provide way to improve air quality

Smart Home Market:

4. McKinsey: 25% of homes (~30 million) in US are ‘connected’
5. Statista: current annual revenue of the Smart Home market in the US is $27 billion

Proposed Solution

Ambient plans to make a product that allows everyone in the world to measure and improve air quality based on three fundamental parameters.

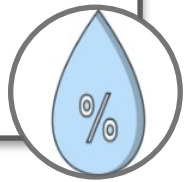

Temperature

- Impacts comfort and productivity
- Correlated with humidity
- Energy intensive

Humidity

- Must be within a healthy range
- Correlated with temperature
- Impacts spread of contaminants

Contaminants

- Organic: pollen, mold, bacteria
- Inorganic: VOCs, SVOCs, Ozone (O_3)
- Infants and elderly are particularly sensitive

Underlying Magic

The innovation behind this product consists of a four-layer system that integrates available technologies with cutting-edge NUS research to enhance performance and reduce

Layer 1

IoT Devices

- Network of low-energy IoT devices
- Advanced commercially-available sensors

- NUS monitoring and localization hardware-software stack

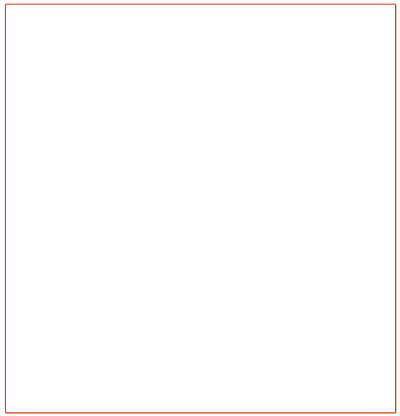

Layer 3

- Pre-processing of data at the IoT device level

- with IoT Services (AWS, Azure)

Team

- 5 years in product and project management roles with tech startups
- Experienced in systems design and technology integration
- MComp, Computer Science, NUS
- BASc, Civil Engineering, U of T

Next Steps

Major Next Steps:

1. Build a strong team
2. Establish a network of advisors and partners
3. Conduct customer discovery to confirm *beachhead* market
4. Develop and pilot the prototype
5. Scale operations
