

AMBIENT SYSTEMS

Climate At Your Service

Partnership Deck Apr 2021

Indoor Farming requires coordinating complex parameters, such as lighting, moisture, and CO2, which require constant monitoring and adjustments to ensure a HIGH QUALITY CROP

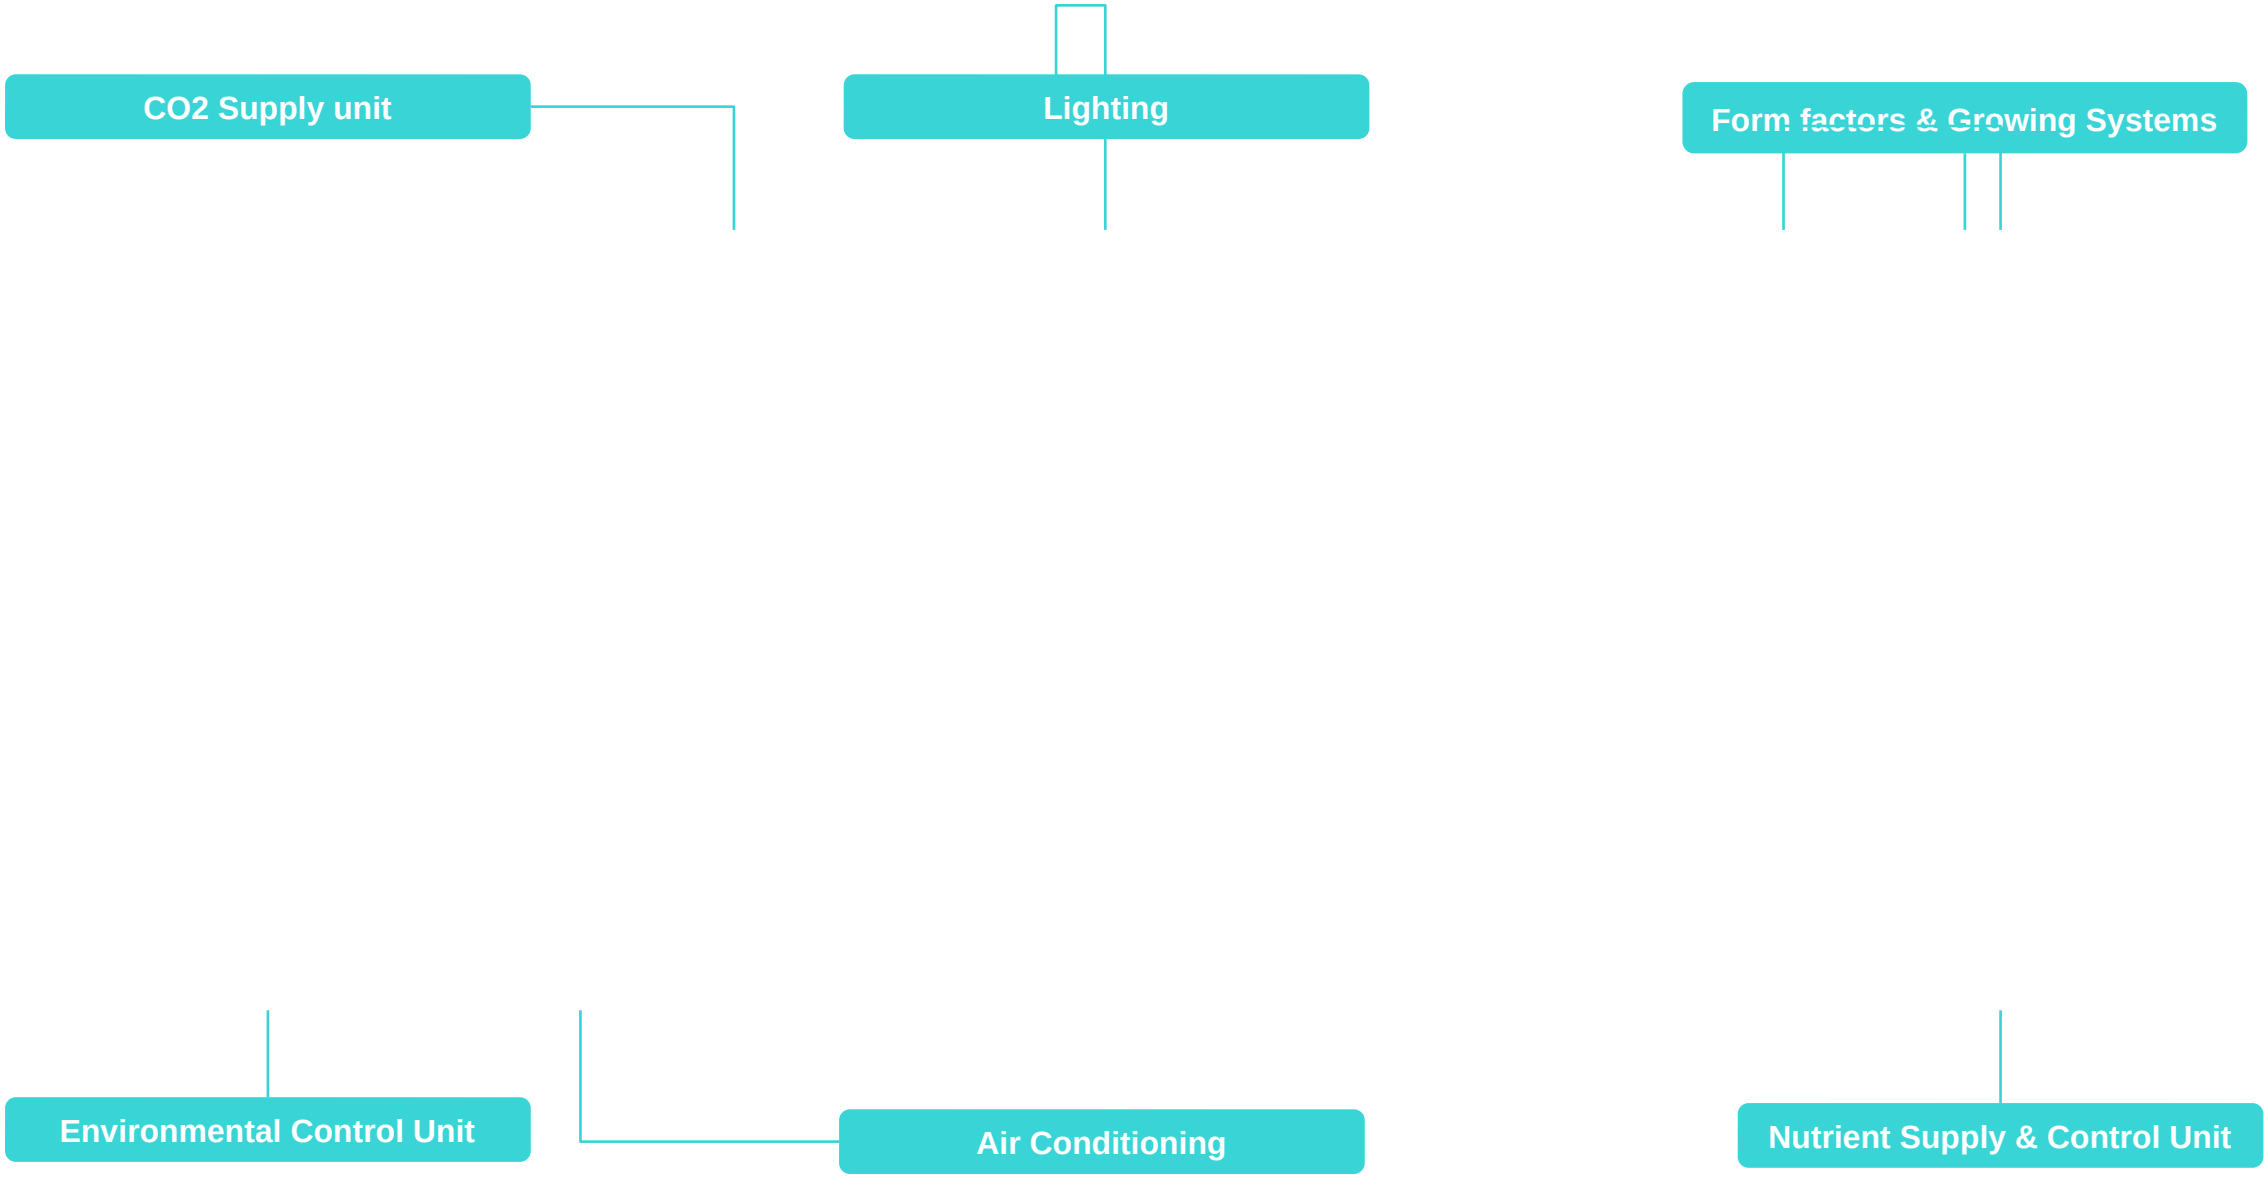

Heat generated by light can cause adverse effect on shelf life in post-harvest

Too much humidity in the air can create a buildup of moss, mildew, and bacteria

Different spectra of light can alter plant traits like color, texture, and shelf life

AMBIENT SYSTEMS
Climate At Your Service

Climate At Your Service

Connected.
Integrated.
Automated.

ɔmprehensive climate management solution
that combines state-of-the-art hardware and
software technologies to deliver real-time
insights and advanced optimization models.

AMBIENT SYSTEMS
Climate At Your Service

1. Connected

Integrated with essential equipment and control systems

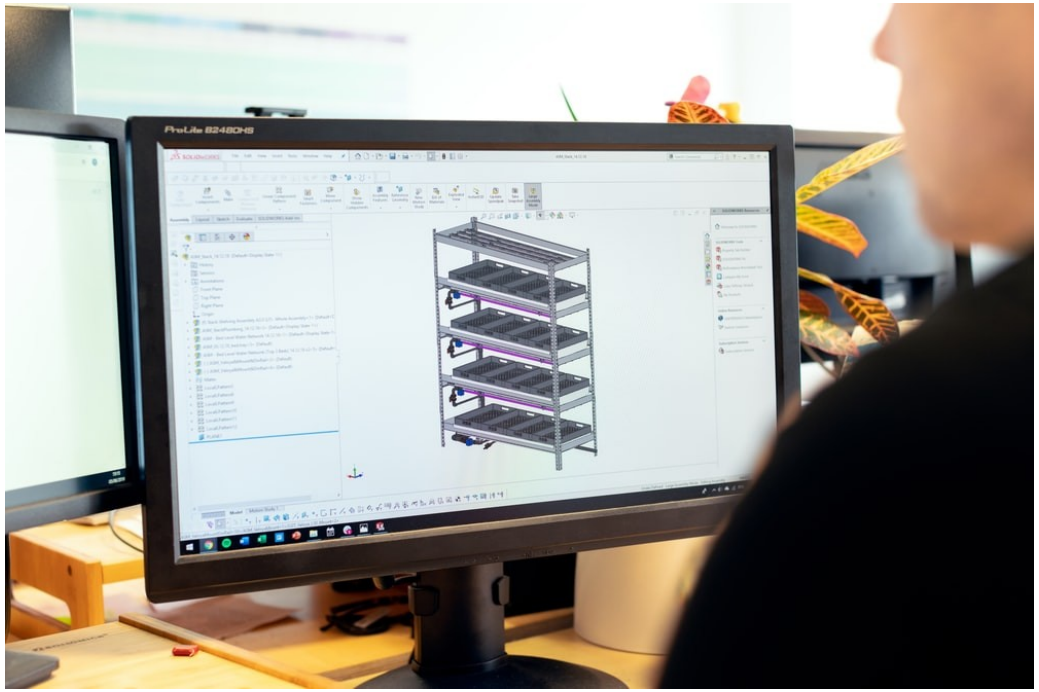

Seamless Building Integration

Connect easily to the existing building management system and air conditioning and mechanical ventilation (ACMV) equipment or have Ambient implement them based on your requirements. Enjoy full connectivity within your farm and perform real-time environmental adjustments based on crop type.

Private and Confidential

2. Centralized

Important data in one easy-to-access place

Monitoring In Real-Time

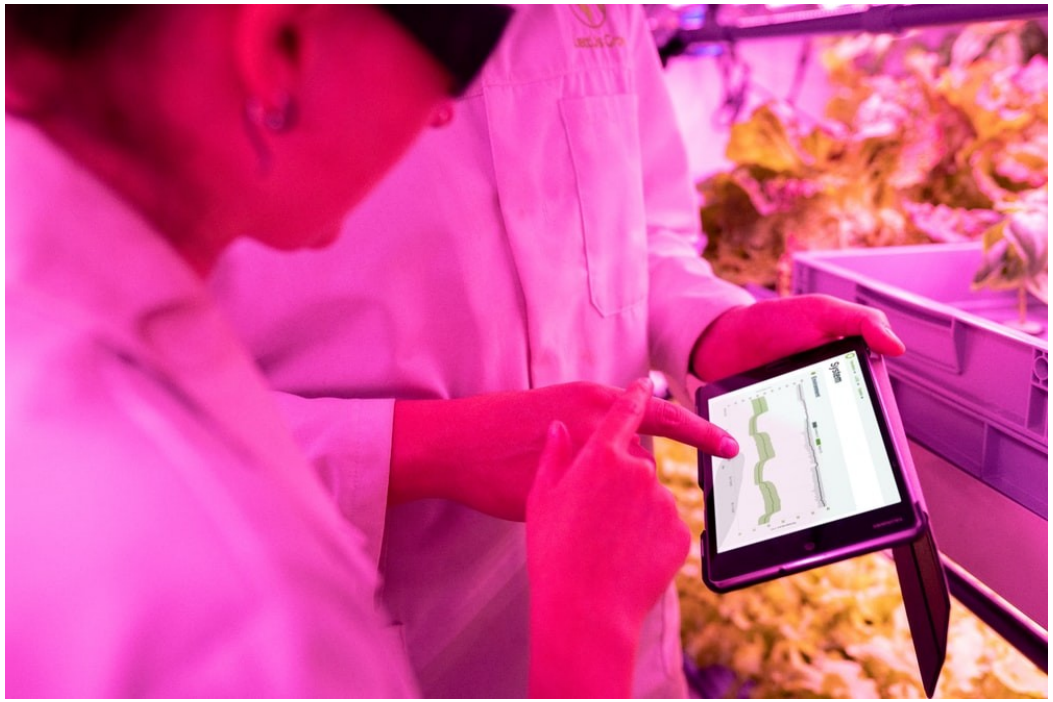

Access real-time data through online dashboards and receive push alerts anytime and anywhere – start measuring most important crop parameters such as temperature, relative humidity, CO2, and light intensity.

3. Automated

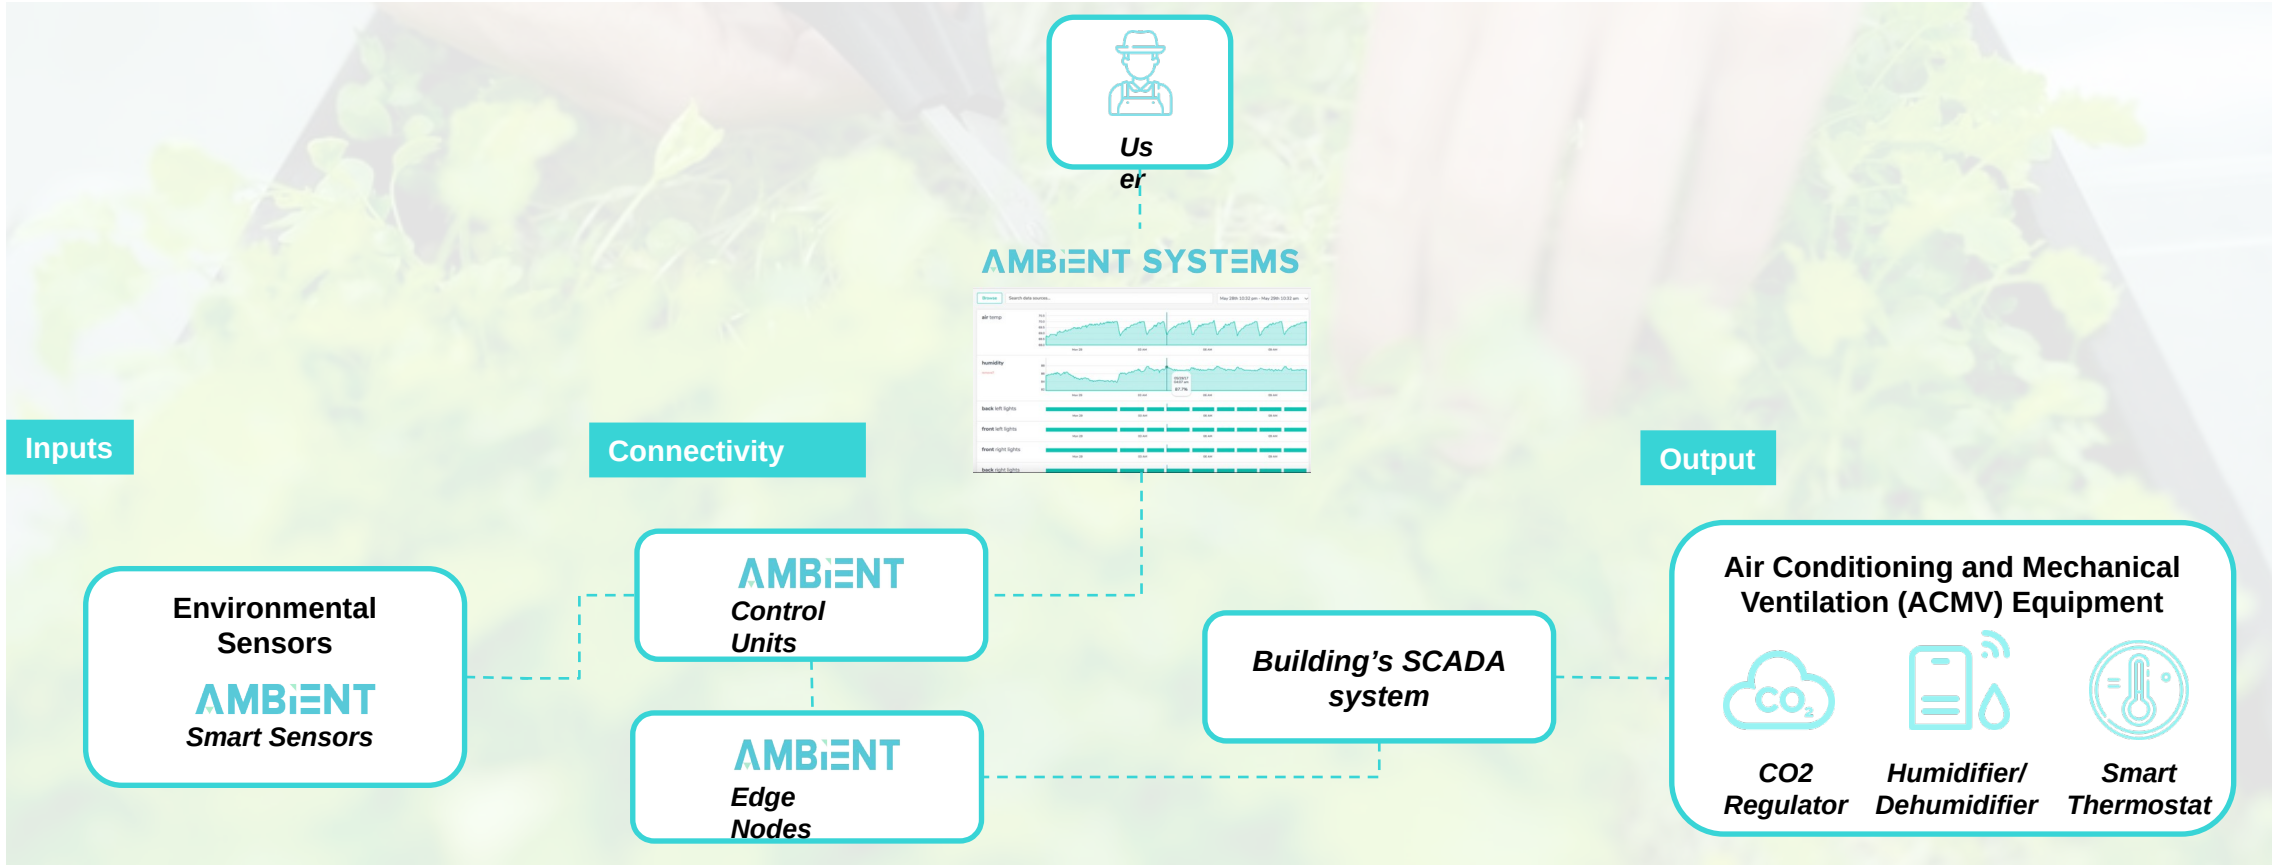

Machine Learning-enabled optimization models

Grow With Data Insights

Securely archive your critical data and leverage latest machine learning models to improve the harvest and reduce operational costs. Apply data-driven solutions to understand factors that affect growth and quality, enabling better crop health.

Value-based Pricing driven by our

For Urban Farms

l Pricing Table for 1 Small Sized Farm
(220sqft or 20.4m2)

SGD ($)			
Implementation Cost	Hardware	**Quotation**	IoT Sensors Device & Installation Integration
	Installation	**Quotation**	**One-time cost**
Operational Cost	Monthly Data Management	**$1,000.00**	**Recurring cost**
	Monthly System Maintenance	**$500.00**	Higher Crop Yield Higher Quality Harvest Time Prediction
Use case specific	Monthly Estimated (% of Crop Value)	**5%**	

Ambient's Climate As A Service solution can be seamlessly deployed in any industries that require a controlled environment

About Us

Product Development

- **MComp, Computer Science**
  National University of Singapore
- **BASc, Civil Engineering, Sustainable Energy**
  University of Toronto
- **Serial Entrepreneur**
  5 years of experience in cleantech & deep tech start-ups (YC-backed)

Corporate Development

- **BBM, Finance**
  Singapore Management University
- **Strategy and Fundraising**
  3 years of experience across e-commerce, gaming and payments

Ambient is a deep-tech spin-off from the National University of Singapore that is developing an integrated hardware-software solution for climate management of vertical farms.

The product leverages intellectual property on securely combining various sources of data and machine learning to enhance building performance.
