
AMBIENT SYSTEMS
Climate At Your Service

Indoor Farming requires coordination of complex parameters, such as lighting, moisture, and CO2, requiring constant monitoring and adjustments to ensure a HIGH QUALITY CROP

Different spectra of light can alter plant traits like **color, texture, and shelf life**

Too much humidity in the air can create a buildup of moss, mildew, and bacteria

Heat generated by light can cause **adverse effect on shelf life** in post-harvest

AMBIENT SYSTEMS
Climate At Your Service

Ambient Platform: Climate-At-Your-Service

Connected
Centralized
Automated

Comprehensive climate management solution that combines state-of-the-art hardware and software technologies to deliver real-time insights

Private and Confidential

1. Connected

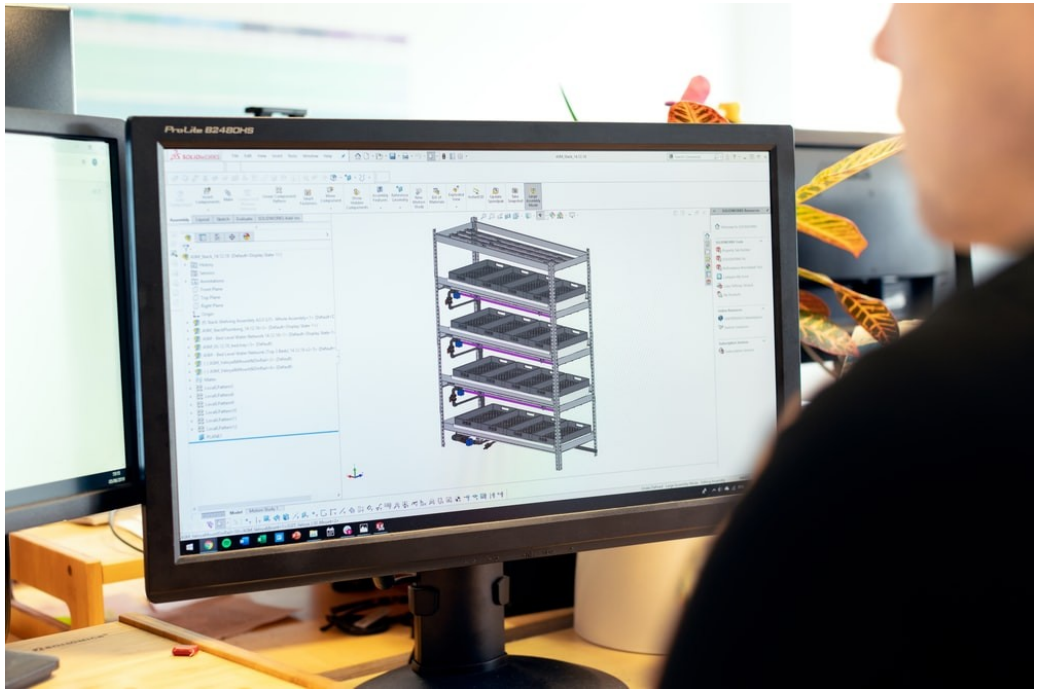

Integrated with essential equipment and control systems

Seamless Building Integration

Connect the indoor farming system to the existing building management system – or have Ambient implement them based on your requirements. Enjoy full connectivity across the farm and perform real-time environmental adjustments based on crop.

Private and Confidential

2. Centralized
Important data in one easy-to-access place

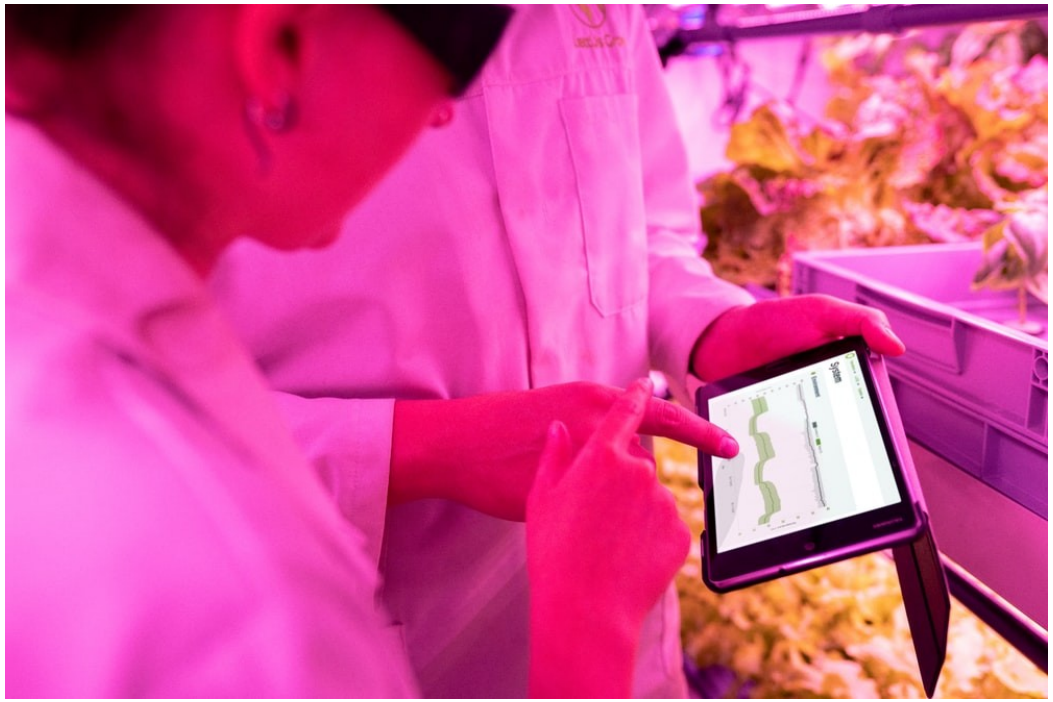

Monitoring In Real-Time

Access real-time data through online dashboards and securely archive all critical operational information. Start measuring most important crop parameters like temperature, relative humidity, CO2, and light intensity

-enabled climate optimization

Grow With Data Insights

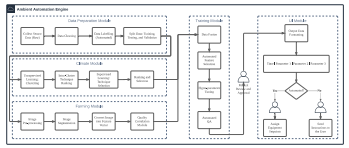

Leverage latest models to improve the e operational costs. Apply data-driven solutions to understand key factors that affect plant growth and quality, enabling better crop health and more accurate harvest timing predications.
