Cyber-Physical Systems (CPS) are driving the next wave of Enterprise Applications

Machine Intelligence

Edge Devices

Cyber Security

Automation

Custom Applications

There is an increasing demand for system optimization beyond energy efficiency

Problem

1. Limited Resources

It's hard to find highly trained and experienced operators who can optimize multiple intelligent systems.

2. Technological Complexity

Many operate with outdated legacy systems and physical equipment that lack interoperability.

3. Competing Priorities

Different physical systems have different requirements based on the unique needs of occupants and operators.

Solution: Applied AI for Cyber-Physical Systems

Sense

Optimize

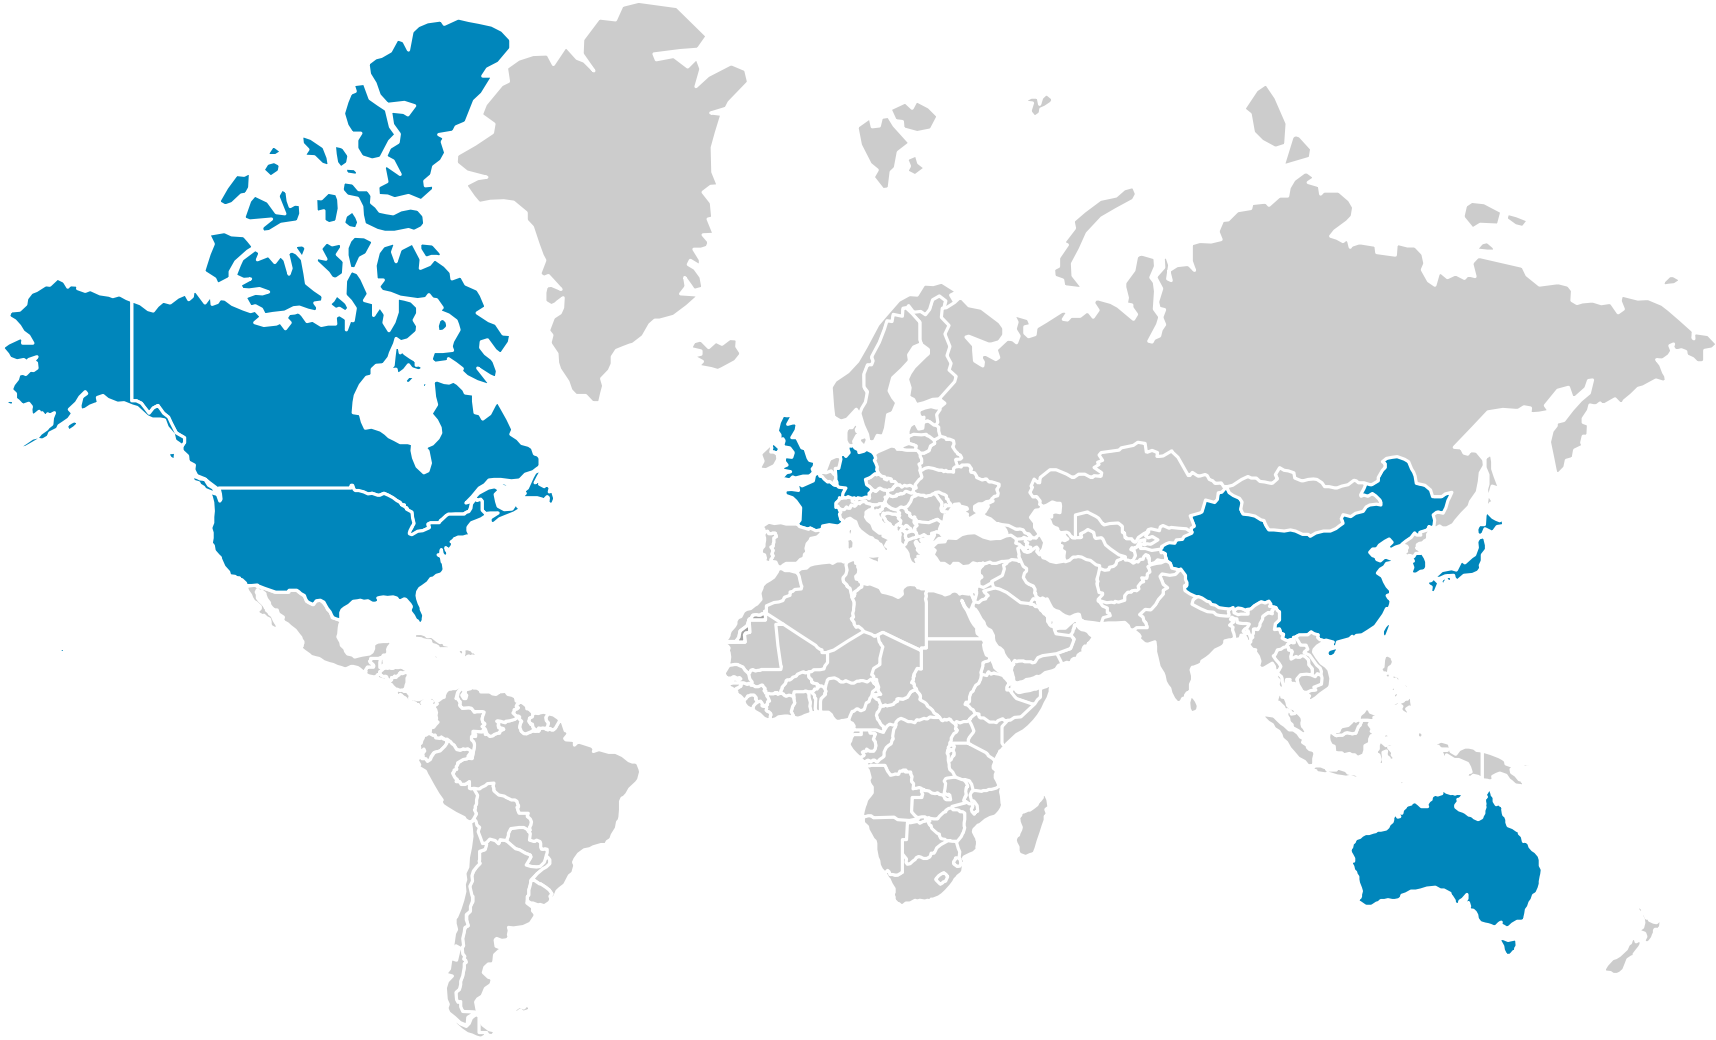

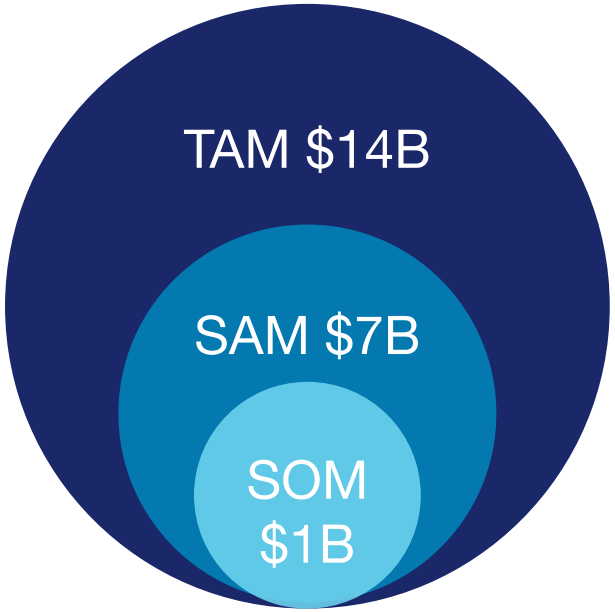

Control

Why Now: Trends Driving AI Adoption

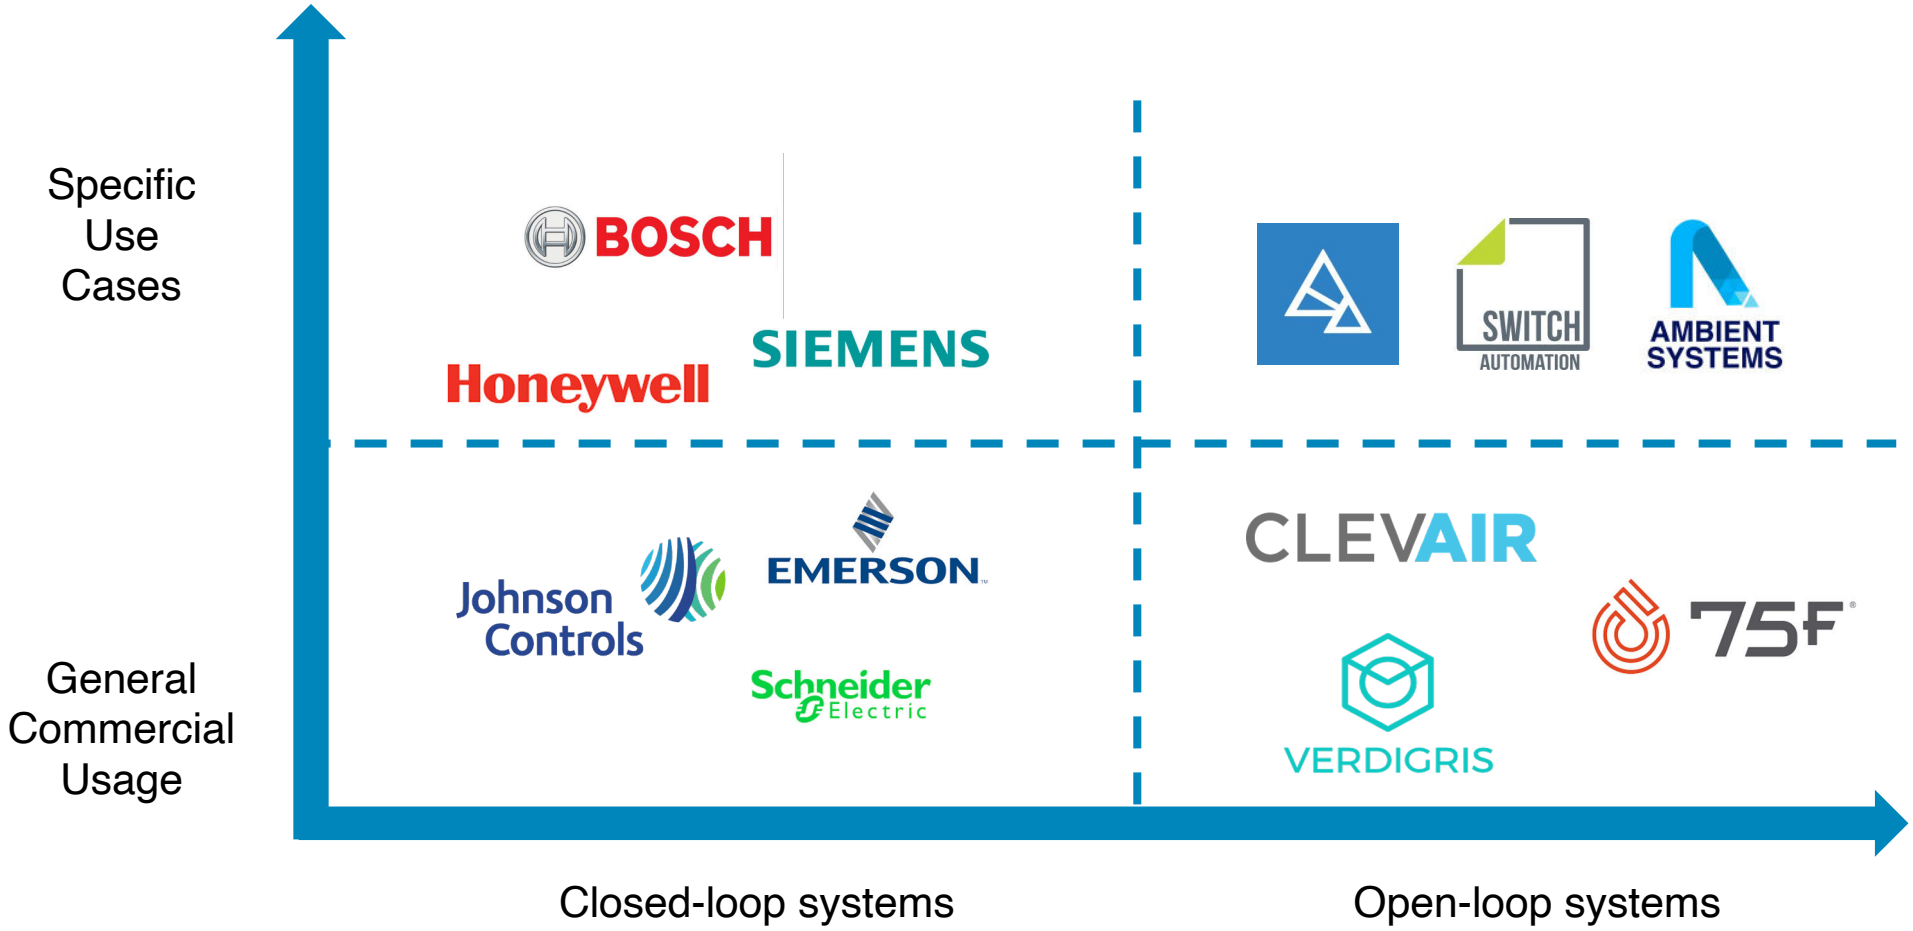

Productivity	Sustainability	Cybersecurity
1. Process Optimization	1. Energy Efficiency	1. System Complexity
2. Enhanced Visibility	2. Carbon Management	2. Increased Attack Surface
3.	3. ESG and UN SDG Reporting	3. Compliance

Unlocking $1B of revenue across specialized segments

Ambient provides tailored AI-driven solutions

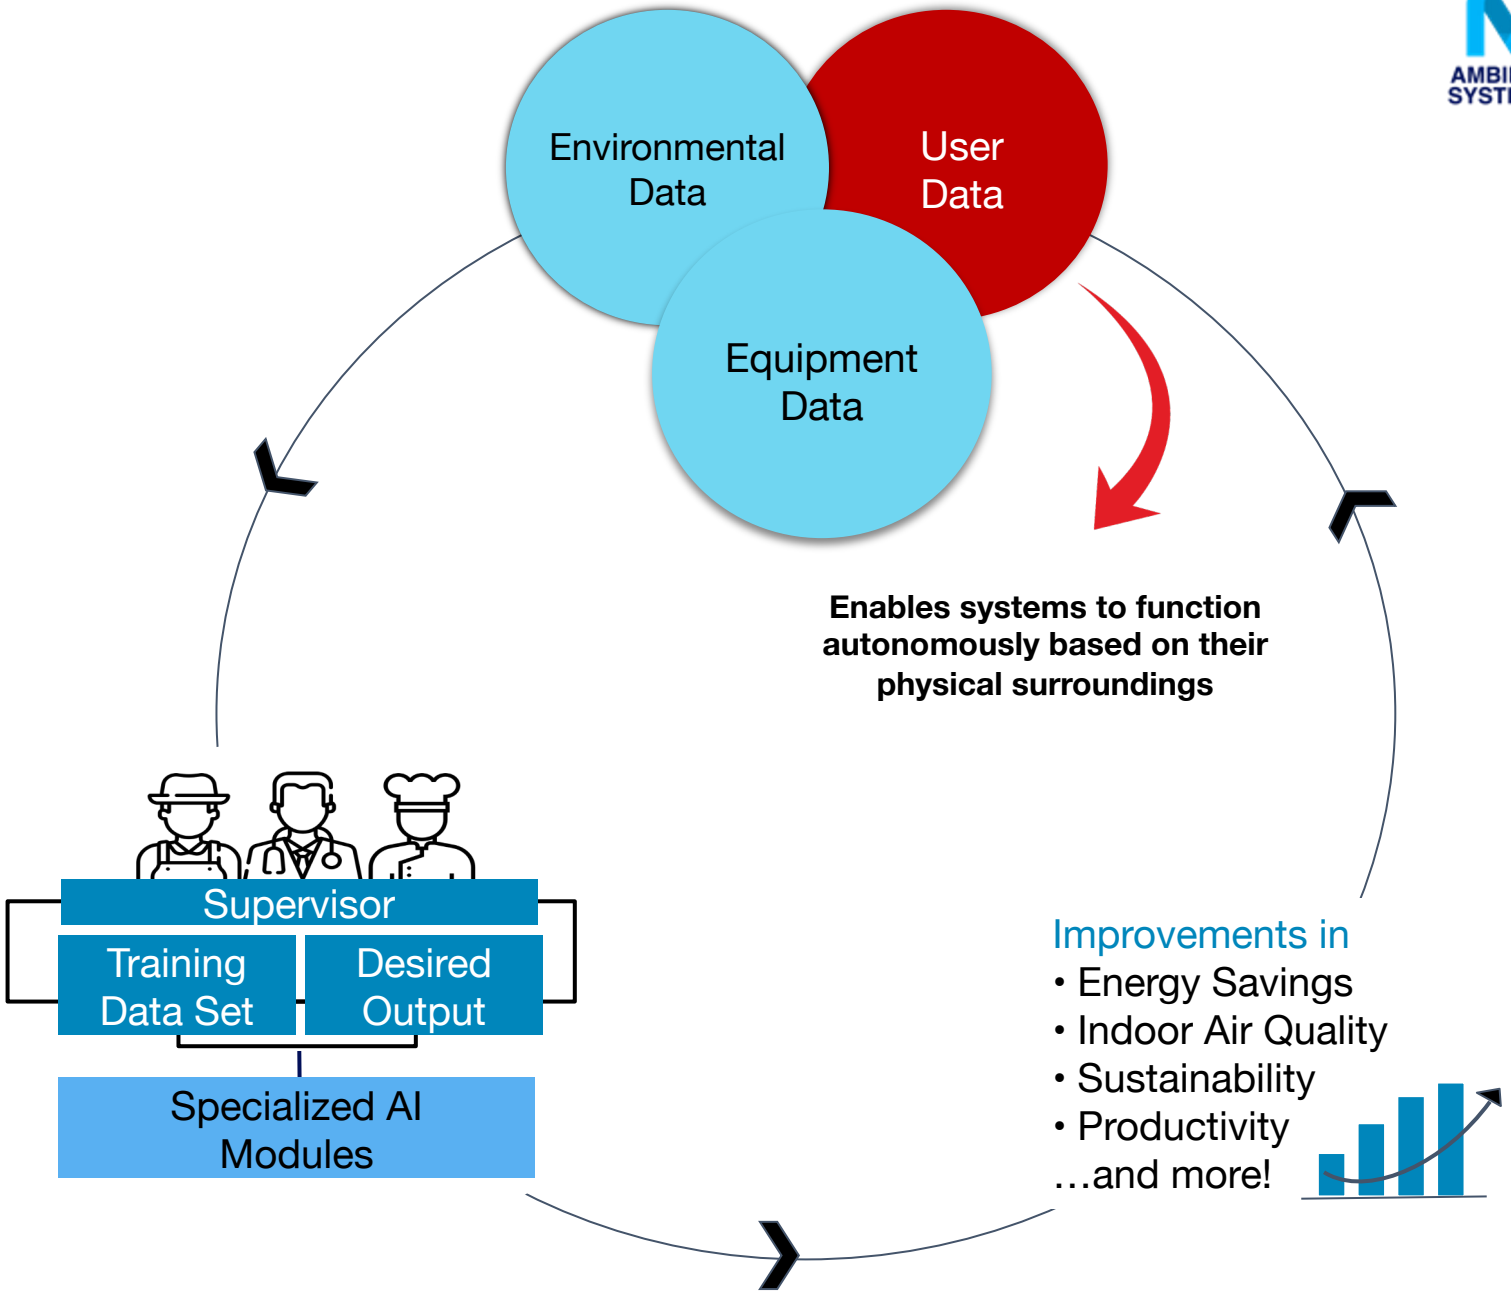

What Makes Ambient Different

Technology: patent-pending invention for the launch market (AgTech)

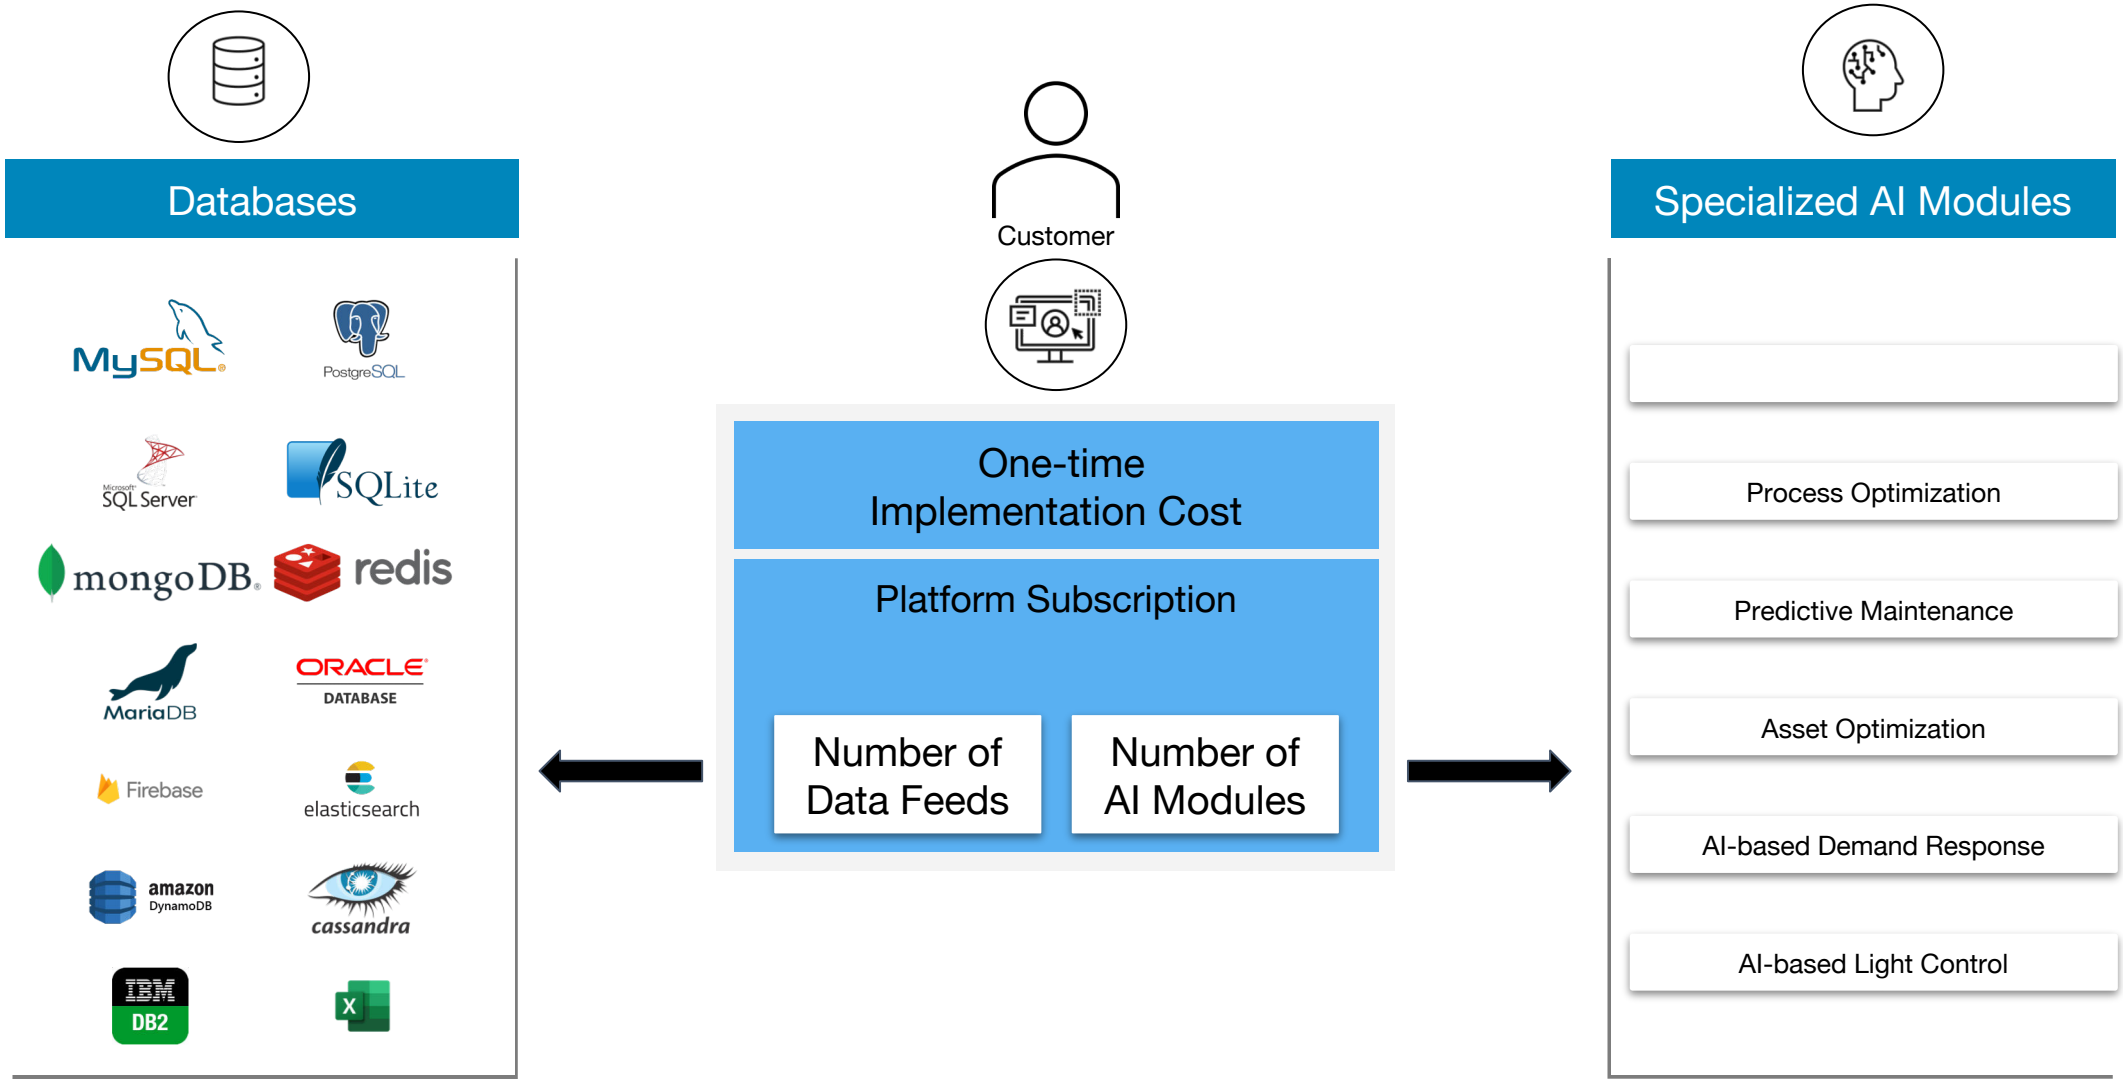

Process: in-depth understanding of the built environment and underlying physics and sciences

Traction: university backing and 3 LOIs with AgTech companies in Singapore

System Optimization beyond Energy Savings

B2B SaaS Model

Usage-based Pricing Plan

AMBIENT SYSTEMS

One-time Implementation Cost
Installation of sensors, networks, and equipment integration

by Project Basis

Basic
SGD $1,000

- Custom data analytics

Markets																		

Fundraising Pre-Seed Round

Funding to Date: $50,000 (SGD)

Raising: $400,000 (SGD)

Committed: $50,000 (SGD)
Gap: $350,000 (SGD)

Use of Funds

- Runway: 12-18 months
- Product development: UX/ , App Development
- Hire core team: Data Scientist, Marketer
- Enable co-innovation and joint-product development in farming, electronics, cybersecurity
- Sign project and distribution partners
- WIPO and filing costs

Ambient aims to be a turnkey solution for CPS

(Global)					
Name	**Ambient**	**Olive**	**Indigo Ag**	**Crowdstrike**	**Tempus**
Description	Ambient is an enterprise artificial intelligence company looking to provide applied AI to cyber-physical systems. The company software offers automation-enabled planning, scheduling, predictive maintenance, efficiency of decision-making.	Developer of process automation software designed to build meaningful artificial intelligence that empowers and scales humans. The company's software acts as a router between systems and data by automating repetitive, high-volume tasks and workflows.	Provider of plant microbiome agricultural services designed to increase crop yield. The company predict which microbes are most beneficial to the health of the crops and apply these specially selected microbes in the form of a seed coating, enabling farmers to reduce risk and increase profitability.	CrowdStrike Holdings, Inc. is a cybersecurity vendor that specializes in endpoint protection, threat intelligence and hunting, attack remediation, and offers various solutions to supplement security and network operations teams.	Developer of a healthcare data analytics platform designed to improve patient outcomes. The company empower users to make real-time and data-driven decisions, enabling physicians to deliver personalized care for patients through an interactive analytical and machine learning platform.

Agtech and Cyber-security focus in SEA

(Global)					
Name	**Ambient**	**Sero**	**Agribuddy**	**Horangi**	**Cyfirma**
Description	Ambient is an enterprise artificial intelligence company looking to provide applied AI to cyber-physical systems. The company software offers automation-enabled planning, scheduling, predictive maintenance, efficiency of decision-making.	Provider of a crop intelligence platform intended to optimize rice production with full-cycle data analytics. The company's platform enables farmers to optimize their rice production by tracking, managing and keeping their crops healthy.	Developer of an ag-tech platform designed to assist farmers in analyzing farm-related information and improve crop yields through collective intelligence. The company's enables rural farmers to manage farms and adopt new farming techniques and be assisted with asset management support services.	Provider of full-stack cybersecurity platform. The company's platform hunts for advanced persistent threats and permits an organization's software development lifecycle to be secure, enabling businesses and corporate clients to understand and respond to issues related to cybersecurity.	Developer and provider of cybersecurity technology that provides threat visibility and intelligence products and services. The company's enables clients to identify threats accurately, receive early warnings of impending cyberattacks to protect their IT infrastructure from breach.

Feature #1: Productivity

1. Evaluate the process needing improvement

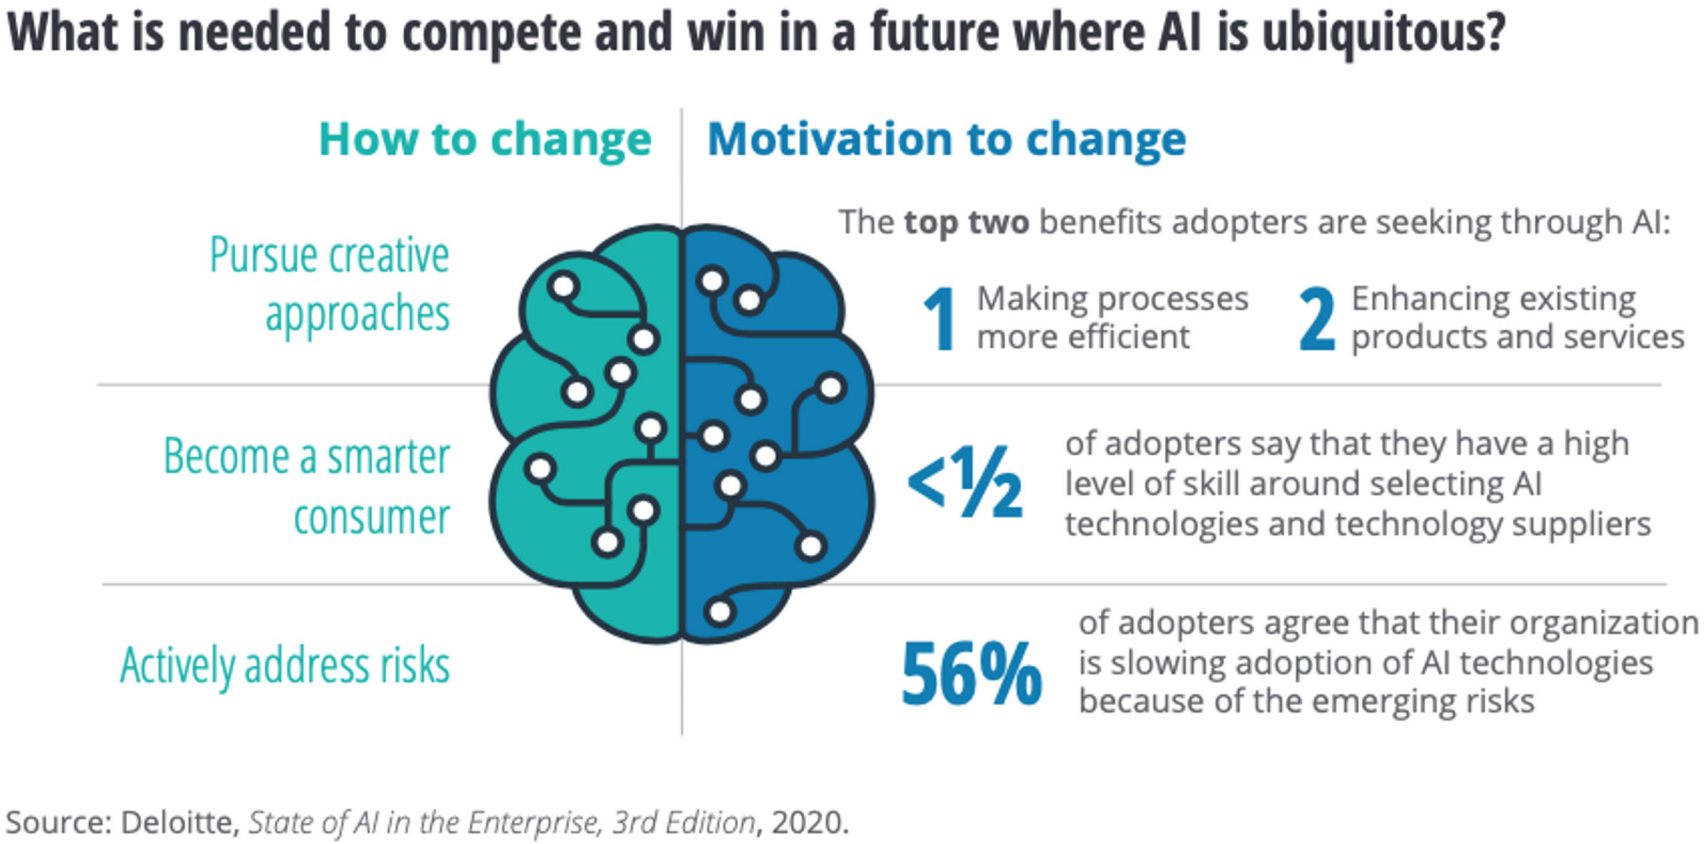

2. Embed intelligent machines across the process

3. Leverage increased visibility, automated monitoring, compliance, and proprietary machine learning models from a single platform

Market Trends: AI-enabled Productivity

Source: Deloitte, *State of AI in the Enterprise, 3rd Edition*, 2020.

Source: Deloitte

Feature #2: Sustainability

1. Full visibility into certification requirements for sustainability.
2. Productivity needs balanced with energy efficiency.
3. Improved IAQ, leading to improvements health and wellbeing of occupants, reducing healthcare costs and risks for respiratory illnesses.

Sample Use Cases:

- Indoor farms conditions and energy costs are optimized simultaneously.
- Whole building ventilation is shifted to when electricity prices are lowest (e.g., night-time).

Increasing Focus on Sustainability

90%

of consumers are concerned about the Environment

Source: Sustainability Matters Now More Than Ever for Consumer Companies BCG, 2020

50%

of CXOs see tackling climate change as their generation's top priority

Source: Industry 4.0: At the intersection of readiness and responsibility Deloitte, 2020

Ambitious targets to green the built environment in Singapore by 2030:

80% green buildings

80% improvements in energy efficiency

80% new buildings to be super lower energy

Source: Industry 4.0: At the intersection of readiness and responsibility Deloitte, 2020

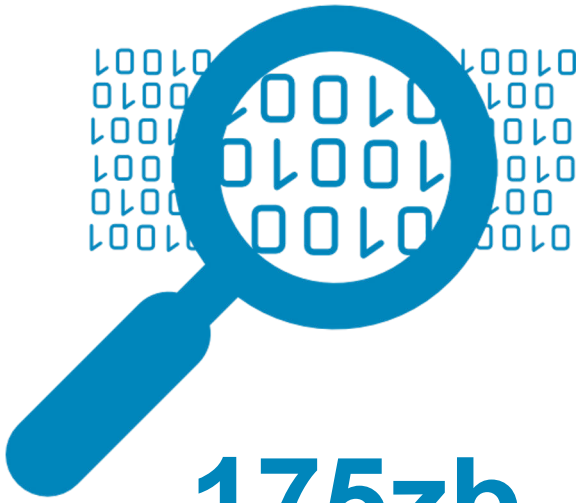

Source: SP Digital

Feature #3: Cyber Security

1. Site-level scripts use device sensor data and metadata to scan for anomalies.
2. Vulnerabilities are discovered and relayed to the user.
3. Leverages ML techniques for classification and anomaly detection.

Market Trends: Cyber Security

175zb

predicted collective sum of the world's data by 2025

Seagate 2018

65% of Organisations have a shortage of Cybersecurity staff

(ISC)² 2019

59% of Companies have experienced a data breach caused by a vendor or third party

Ponemon Institute 2018

51% of Cybersecurity professionals say their organisation is at risk due to Cybersecurity staff shortage
