Ambient Systems

Operations Management Plan

Key Metrics

- Units: ”Financial Artifact” (plan or a report or an insight)

  (rate):
  - 1 artifact at a time
- Inventory:
  - Limited by personnel not system
- Flow Time:
  - Subscription time (e.g., 30 days -> 1 year)

Process Analysis

	Ambient Process	Current Process
Station 1 Integration	1. Select goals (report, plan, or insight) 2. Identify platforms 3. Identify legacy databases 4. Identify siloed datasets 5. Identify cloud providers 6. User permissions	1. Manually handled by IT 2. Create a formal request 3. Get approval from hire-ups 4. Demonstrate ROI 5. Version control 6. Manually format and email to colleagues
Station 2 Processing	1. Check dataset for format and type 2. Check dataset for value errors 3. Check dataset against benchmarks	1. Done by different teams 2. ? 3. Financial Analysts does the BI queries 4. Financial Analysts upskill 5. Data Science teams support?
Station 3	1. Prepare the artifact? (Input required by the user: some instructions) 2. Client's team does it or Ambient hires someone and gives them instructions and process to follow quality and timeliness	1. Prepared by senior team members with analyst support
Station 4 Analysis	1. Select data science needed 2. Budgeting or Forecasting 3. Financial Analysis 4. Visual Analytics Dashboard 5. Activity Dashboard	1. Identify objective 2. Find / search for techniques 3. Try out and iterate on technique 4. Seek new data for the technique
Station 5 Output	1. Present output: report, plan, or insight 2. Deliver output 3. Data export / API	1. Put in word file, format manually, prepare pdf and email

Quantified Benefits

	Ambient Process	Current Process	Difference and Benefits
Station 1 Integration	• $ • Time • Auditable / Traceable	• $ • Time • Auditable / Traceable	• X % less time • X % less error • X % more data sources available
Station 2 Processing	• $ • Time • Auditable / Traceable	• $ • Time • Auditable / Traceable	• X % less error • X % more volume • X % more different sources • X % faster
Station 3	• $ • Time • Auditable / Traceable	• $ • Time • Auditable / Traceable	• X % more analysis • X % faster
Station 4 Analysis	• $ • Time • Auditable / Traceable	• $ • Time • Auditable / Traceable	• X % richer information
Station 5 Output	• $ • Time • Auditable / Traceable	• $ • Time • Auditable / Traceable	• X % faster reports • X % richer information
		Total Benefit	X % cost savings X % more value X % faster audit X % comprehensive de-risking

Fulfilment Costs (separate from Product)

- Costs linked to time and computing for capacity
- Linking demand and capacity
  - Demand: sales and contracts
  - Capacity: personnel and servers available
- Personnel Costs (tasks and jobs)
  - Inform customer about products and services
  - Answer customer questions
  - Collect customer information
  - Prepare dataset mapping (four types: marketing, financial, operational, and HR)
  - Configure APIs
  - Configure visualizations
  - Configure report output
  - Manage payments, price, quotation, and invoices
  - Perform financial calculations and analysis
  - Prepare a financial plan using available data
  - Prepare different types of operational plans using available data: hiring, sales and revenues, costs, budgets, production
  - Configure machine learning template to improve anything in the plan (e.g., increase vehicle utilization increases revenues, improve vehicle usage to extend equipment lifetime to reduce maintenance and replacement costs)
