Indoor Farming requires coordination of complex parameters, such as lighting, moisture, and CO2, requiring constant monitoring and adjustments to ensure HIGH-QUALITY output

Building Conditions affect crops

- Inconsistent Environment
- Habitat for Mold and Pest
- Affect level of photosynthesis

AMBIENT SYSTEMS

Current Solutions are Lacking

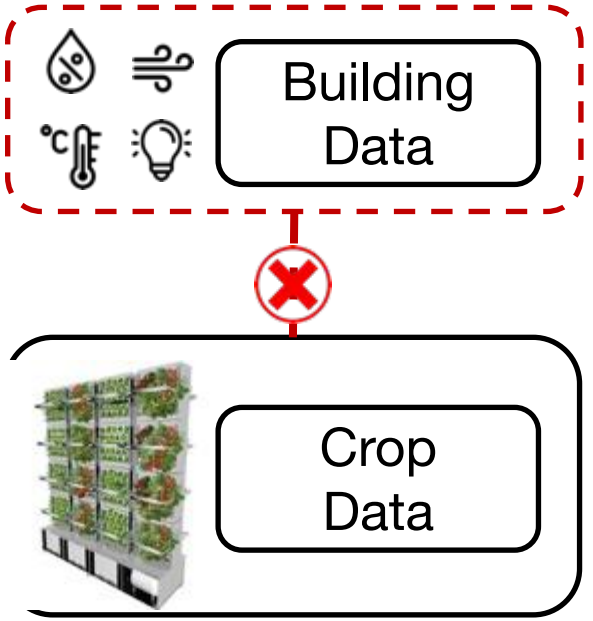

Farm systems do not collect building data

Container farms not built for scale

Building solutions are too general

Equipment Settings

Sample Action
• Adjust temperature • Adjust ventilation • Adjust lights • Turn on fogging machines • Turn on CO2 regulator • Balance irrigation and humidity levels
