

ivan@ambientsystems.ai

We provide sensor and video solution for improving financial performance in transportation

MVP Scope Document

1. Company Background
2. Market Context
3. MVP Objective / Project Charter

Private & Confidential. Copyright Ambient Systems.

Company Background

- Canadian founder and investors
- Incorporated in 2021
- Winner of Panasonic Deep Tech Innovation Challenge
- Seeking to develop the ‘MVP’ for commercialization

Private & Confidential. Copyright Ambient Systems.

Project Charter

- Project Objective
- Project Outcomes
- Timeline
- MVP Scope
- Field Testing
- Budget

Private & Confidential. Copyright Ambient Systems.

Project Objective

- Better data integration, including IoT data from the field
- AI Applications in Finance and Operations
- Easier user interface and experience
- Domain specific pre-processing, data quality, data enhancement

Private & Confidential. Copyright Ambient Systems.

Project Charter: Project Outcomes

- MVP / Technical Prototype / Field Test
- Commercial prototype
- Further agreement with technology partner

Private & Confidential. Copyright Ambient Systems.

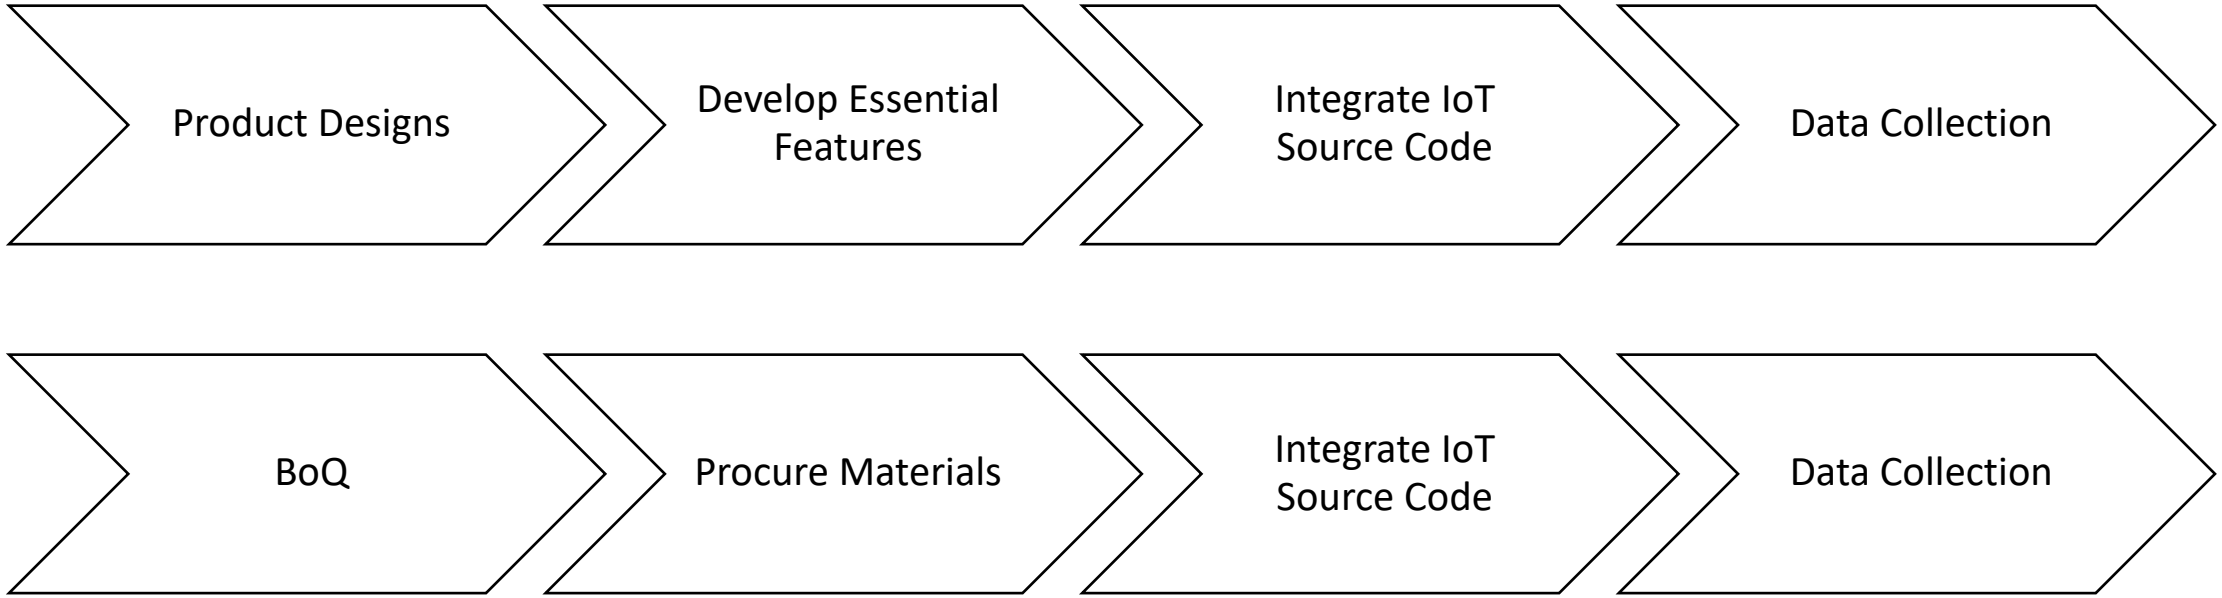

Project Charter: Timeline

- Timeline:
  - MVP: April or May to August (3-4 months)
  - Commercial Deployment: September to December
  - Scaling: December onwards

Private & Confidential. Copyright Ambient Systems.

Project Charter: MVP Timeline

May	June	July	August

Private & Confidential. Copyright Ambient Systems.

Project Charter: Design

- User-Centric Interface Design
- Responsive Design with Multi-Platform Support
- Accessibility Compliance
- Visual Design Consistency
- User Feedback and Iterative Design Process

Project Charter: Design User Personas

			ona
Role	Usuall lanning and forecasting.	Usual for costs and compliance.	Overs ng fleet manag[illegible].
Responsibilities	Focuses on financial planning and analysis, including forecasting revenues and expenses, budgeting, and providing insights to support strategic decision-making.	Primarily concerned with managing costs, ensuring compliance with regulatory requirements and internal policies, and maintaining accurate financial records.	Ensures efficient vehicle and driver utilization while managing routing and scheduling to minimize transit times and costs, and coordinates with suppliers to optimize freight movement.
Needs	Requires tools and features that enable accurate forecasting, scenario planning, budget management, and the ability to analyze financial data to support business objectives.	Requires tools and features that streamline cost management processes, facilitate compliance with regulatory standards, automate financial reporting tasks, and provide visibility into financial data for auditing and reporting purposes.	Requires real-time tracking and monitoring tools for fleet management, alongside insights for route optimization, fuel savings, and operational efficiency.

Project Charter: Essential Features

- Hosted on the cloud
- Migration of
- Server-side communication with APIs
- Standard Connectors
- Add IoT data ingestion
- Add ML/AI integration

Private & Confidential. Copyright Ambient Systems.

Project Charter: Data Collection

- Vehicle type: bus, electric bus, truck/freight vehicles
- Data from vehicle: road camera(s), in-vehicle camera(s), telematics, vehicle diagnostics
- Data from operations/finance: fuel consumption, other costs
- Third party data: weather, traffic, etc.
- Test Duration: TBD
- Upload frequency: hourly for the test
- Data volume: 1 bus with 6 standard definition (SD) cameras will generate 50 GB per day (24 hours)
- **Upload speed: New Technology can upload 50GB in ~3 minutes @ 2 Gbps (7x faster than alternative)**

Next steps

- Ambient Systems
  - Incorporate in Canada (in-progress)
  - Collaboration Agreement with Centennial College
  - Funding contribution
- Panasonic & Ambient Systems
  - Finalize MVP Plan & Scope
  - Re-visit customer list
  - Review and finalize client proposal pitch deck
