Ambient Systems Platform

The Ambient Systems platform provides a comprehensive suite of tools tailored to streamline data management, financial planning, and operational optimization. By integrating data sources, tracking key financial metrics, and allowing customized goal setting, it empowers users to make data-driven decisions effectively. The platform’s flexibility in data input (manual, import, or real-time sync), combined with its powerful reporting and request system, positions it as an invaluable asset for users in industries like commercial real estate.

News Page

Purpose: The News or Alerts page provides updates on recent activities within the platform, such as data uploads, new requests, and system alerts.

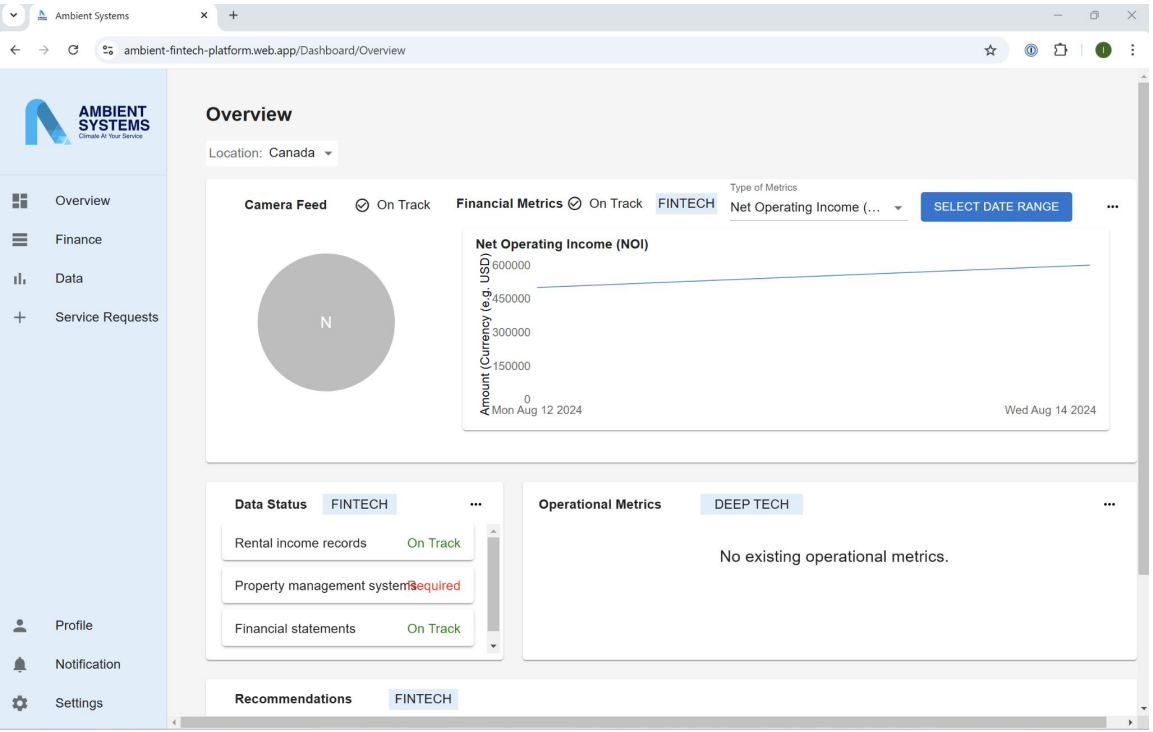

Features:

- **Feed Status**: Displays the current status of data feeds and any updates or issues needing attention.
- **Alerts**: Lists all recent actions, like new data uploads, created requests, or critical changes in system metrics, helping users stay informed of recent activities.

User Actions:

- Review recent updates and ensure no critical alerts are overlooked.
- Address any new requests or updates to maintain smooth platform operations.

Overview Page

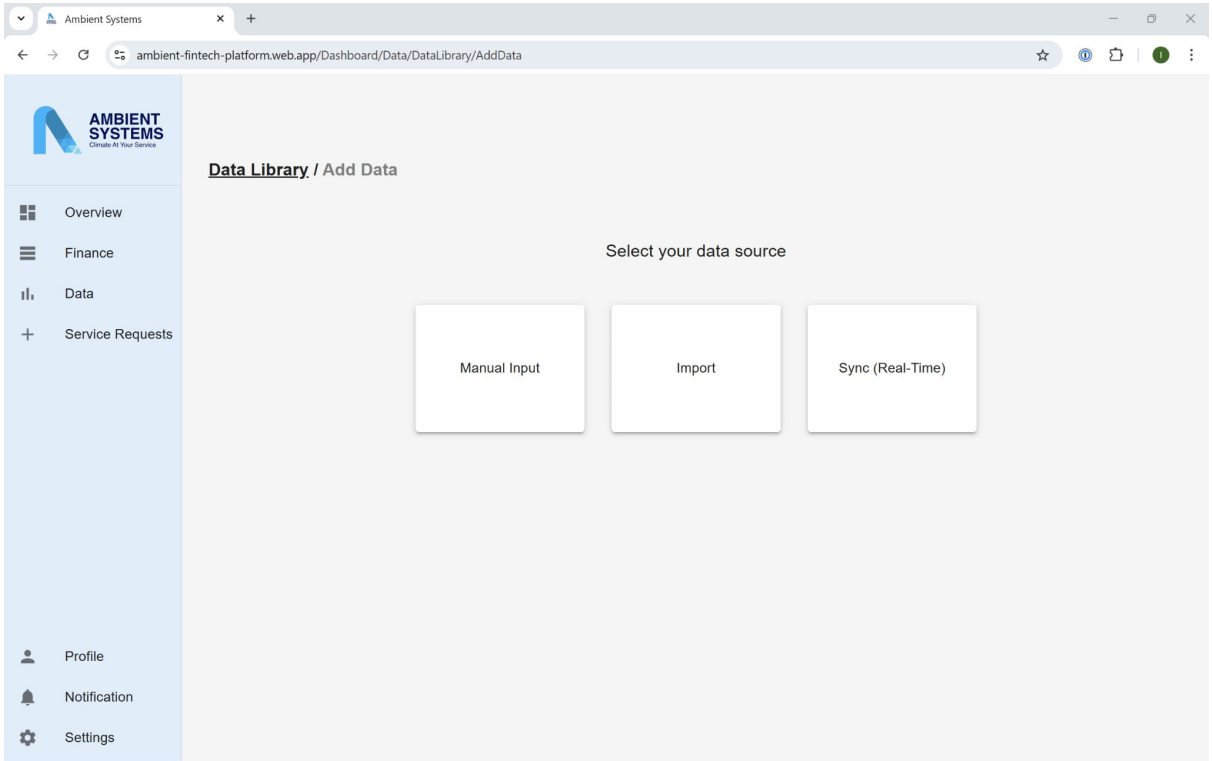

- **Purpose**: Provides a high-level snapshot of financial and operational metrics, helping users monitor current performance.
- **Features**:
  - **Financial Metrics**: Displays important financial metrics, such as Net Operating Income (NOI), in a graphical format over a selected date range.
  - **Data Status**: Shows the status of essential data inputs like rental income records and financial statements, indicating if they are up-to-date, required, or missing.
  - **Recommendations**: Offers actionable suggestions to help users improve key metrics, like optimizing income or reducing vacancy.
- **User Actions**:
  - View real-time metrics and confirm that all necessary data inputs are complete.
  - Follow any recommended actions to improve performance in specific areas.

Data

- **Purpose**: Provides a catalog of available data types that users can manage and link to specific metrics.
- **Features**:
    - **Data Option List**: Lists different types of data, such as rental income records, property management systems, and financial statements, along with their descriptions and linked metrics.
    - **Status Indicators**: Shows the status of each data type, indicating whether it’s up-to-date or missing.
    - **Add Data**: Allows users to add new data or update existing records.
- **User Actions**:
    - Check the status of each data type and ensure critical data is up-to-date.
    - Add or update data as necessary to maintain accurate metrics.

Data Import Page

- **Purpose**: Allows users to select their data source type, whether manual input, file import, or real-time sync.
- **Features**:
  - **Source Options**: Users can choose from three main methods for data entry: manual, import, or real-time sync.
  - **Guidance for New Users**: Helps users understand the available data entry methods.
- **User Actions**:
  - Select the most suitable data source for the type of data they need to add.
  - Follow the corresponding steps for the chosen data entry method.

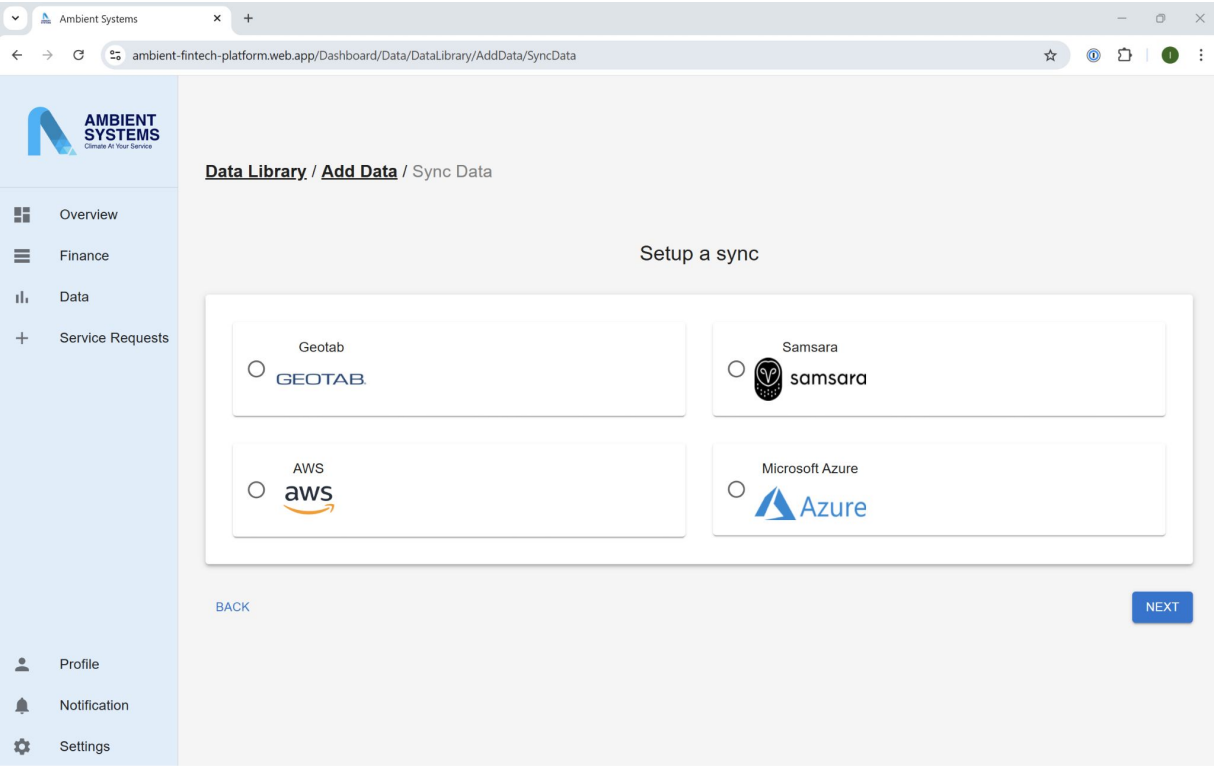

Data Library - Manual Import Page

- **Purpose**: For users who prefer or need to manually input data, this page allows data entry without uploading files.
- **Features**:
  - **Field Inputs**: Users can manually enter key data points for property management, such as lease dates, tenant names, and monthly rent.
  - **Add Row**: Adds additional entries if there are multiple data points to be entered.
  - confirm their entries to save data in the platform.
- **User Actions**:
  - Enter data manually, especially for small or single data points.
  - Confirm entries to ensure they are saved accurately.

Data Library - Manual Import Page

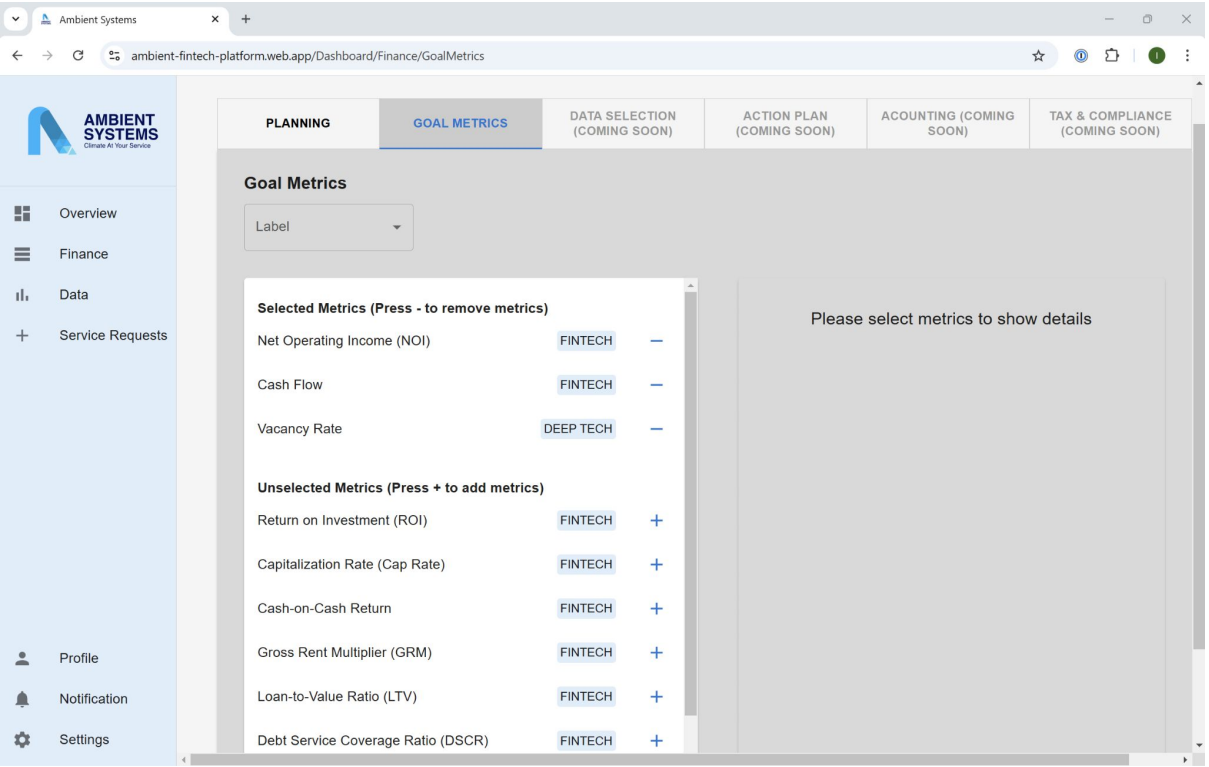

- **Purpose**: For users who prefer or need to manually input data, this page allows data entry without uploading files.
- **Features**:
  - **Field Inputs**: Users can manually enter key data points for property management, such as lease dates, tenant names, and monthly rent.
  - **Add Row**: Adds additional entries if there are multiple data points to be entered.
  - confirm their entries to save data in the platform.
- **User Actions**:
  - Enter data manually, especially for small or single data points.
  - Confirm entries to ensure they are saved accurately.

Data Library - Sync Data Page

- **Purpose**: This page allows users to connect external data sources to the platform, enabling real-time syncing of data.
- **Features**:
  - **Source Selection**: Users can select from various external data sources, including AWS, Azure, Geotab, and Samsara, to bring in relevant data.
  - **Setup Sync**: Provides options to configure real-time data syncing, allowing continuous data inflow without manual intervention.
- **User Actions**:
  - Select the desired external data source.
  - Set up and test the real-time sync connection to ensure consistent data flow.

Finance - Goal Metrics Page

- **Purpose**: Enables users to customize and track specific financial goals.
- **Features**:
  - **Selected vs. Unselected Metrics**: Users can toggle between selected metrics, such as Net Operating Income (NOI), and , and unselected metrics to customize their tracking.
  - **Metric Details**: Each metric can be expanded to view more detailed information.
- **User Actions**:
  - Select relevant metrics for business objectives.
  - Review metric details for insights on goal progression and status.

Finance - Planning Page

- **Purpose**: Helps users set and track completion rates for financial goals, offering a structured view of progress.
- **Features**:
  - **Metric Plans**: Displays plans for key financial metrics, such as NOI, and , along with progress and benchmarks.
  - **Data Sources**: Lists associated data sources, like property management systems and financial statements, to provide transparency.
- **User Actions**:
  - Review progress for each financial goal.
  - Confirm data sources are complete and address any missing data to keep metrics up-to-date.

Service Requests Page

- **Purpose**: Provides a way for users to request additional services or resources, such as AI models, data analysis, or hardware support.
- **Features**:
  - **Request Types**: Offers various types of requests (AI Model, Report, Data, Hardware), allowing users to specify their support needs.
  - **Request Submission**: Users can submit a request with a brief description, ensuring their needs are met by the Ambient Systems team.
- **User Actions**:
  - Choose the appropriate request type and fill in a description.
  - Submit the request for further assistance, ensuring smooth operation and support.
