Automate Climate Management

About Ambient

Ambient is a deep-tech spin-off from the National University of Singapore (NUS) that is developing an integrated hardware-software solution for climate management of vertical farms.

The product leverages Intellectual Property (IP) to optimize crop yield and quality in addition to traditional metrics such as energy efficiency.

AMBIENT FLAGSHIP PRODUCT

Climate-as-a-Service

MONITORING

Measure most important parameters for vertical farm operations, starting with temperature, relative humidity, CO_2, and light intensity.

SEAMLESS INTEGRATION

Connect easily to the existing building management system and related equipment or have Ambient implement one based on your requirements.

REAL-TIME ACCESS

Access data in real-time and receive push alerts anytime and anywhere on the status of your farm.

MACHINE INTELLIGENCE

Increase crop yield and quality using machine learning-enabled models that control building systems to optimize the climatic conditions.
