Cover Page
Company Logo
Company Slogan

1. Executive Summary

A 1-page description of the business plan, including the vision/mission of the company, the business opportunities and market size, the technology and solutions, and growth strategies, intellectual properties, financing and the founding team.

2. Business Opportunities

Problem Definition:
A clear description of the problems faced by the customers.

Market Size:
A facts-driven computation of the target market size based on the problems faced by the customers. Please indicate sources of information and research.

3. Solutions and Competitive Analysis

Solutions

A clear description of solution (MVP) based on your technology that will solve customer problem uniquely.

Note:

1. A MVP should be a functional, working prototype with essential features and functions that can address your beachhead customer's most important pain point(s) or gain(s). A mock-up nor a lab-based demo/concept unit which does not demonstrate critical functionalities and features of a required MVP is not acceptable.

2. The essential features and functions of the MVP should be quantified. For instance the features resulted in 30% faster performance; 50% reduce in cost, 20% less resources required than existing competitors' products. The 2x2 matrix competitive analysis chart should be substantiated by the qualitative description of product's features and their performances (in the e.g., in the specification table).

3. and Growth Strategy

s

launch/pilot customers (name, budget, schedule) with the aims to illustrating the S$1m customer.
For cl arity, the S$1 million customer(s) is defined as a customer(s) that can generate S$1 mil sales revenue for the company within 3 years of product launch

Growth Strategies:
Illustrate the growths strategies towards billion dollar market. This can be done using bowling pin strategy with illustration of the sales growth.

5. Intellectual Properties & Product Development

Intellectual Properties
List of the various IPs (trademarks, copyrights, patents and trade secrets). A preliminary Freedom To Operate (FTO) analysis for the targeted markets. IP intelligence analysis of competitors using patent map.

Description of the NUS licensing terms.

Product Development
Milestones of the product development

4. Pricing, Cashflow and Financing

Pricing

Pricing of Product and/or Services
Pricing Strategy - Detailed explanation of how the product/service is priced based on value pricing (strongly encouraged), benchmark pricing (if value pricing is not possible) and cost-based pricing (strongly discouraged).

Cashflow

Computation of the BOM and the cashflow for 5 years (at the minimum).

Note:

1. *Team must demonstrate that the BOM and Expenses incurred in the Cashflow projections are within industrial and market 's normal ranges.*
2. *The cashflow should ideally exhibit exponential growth in Sales Revenue and Net Profit when the J-Curve Effect kicks in. How this corresponding J curve effect would be attained should be elaborated.*

Financing

Investments required for various milestone and valuation (if possible).

Notes:

1. *As a rule of thumb, the following metrics could potentially undermined the investability of a deep tech start-up*
    a. *A lower gross margin (< 50%)*
    b. *A lower valuation (< $5 mil, based on discounted cash flow, applying no risk corrected discounting rate, i.e.,~ 10%)*
2. *Further justifications are critical in these cases to demonstrate the attractiveness of the business from the investors' perspective.*
3. *The minimum required Cashflow Projection period is 5 years.*
    a. *Some industries or sectors that require longer period to breakeven and/or demonstrate exponential growth. For example, in medical technologies, due to the more extensive and longer certification and verification process, a longer Cashflow Projection period (>5years) may be necessary to demonstrate the viability of the business.*
4. *Do not use Terminal Value for discount cashflow computation.*

5. Founding Team

Founders
Description of the founders.

Advisors
Description of advisors (both technical and business)

Note:

1. *Team clearly identify the role/s and responsibilities of each team member.*
2. *Team should highlight the previous work experiences and/or projects that are relevant to the start-up.*
3. *Team should explain how they will supplement the team's collective strength if certain required skill sets or roles are missing (if any).*
